Materialized Views Techniques Implementations And Applications:

Materialized Views Ashish Gupta, Inderpal Singh Mumick, 1999 When an application is built an underlying data model is chosen to make that application effective Frequently other applications need the same data only modeled differently The naive solution of copying the underlying data and modeling is costly in terms of storage and makes data maintenance and evolution impossible View mechanisms are a technique to model data differently for various applications without affecting the underlying format and structure of the data The technique enables applications to customize shared data objects without affecting other applications that use the same objects The growing data manipulation needs of companies cannot be met by existing legacy systems that contain valuable data Thus view mechanisms are becoming increasingly important as a way to model and use legacy data in new applications Materialized views are views that have been computed and stored in databases Because they reduce the need to recompute the view and or data being queried they speed up the querying of large amounts of data Further because they provide a systematic way to describe how to recompute the data maintenance and evolution can be automated Materialized views are especially useful in data warehousing query optimization integrity constraint maintenance online analytical processing and applications such as billing banking and retailing This comprehensive volume with a foreword by Jeff Ullman of Stanford University will serve as a reference for students and commercial users and encourage further use and development of materialized views **Web Technologies and**

Advanced Information Systems Engineering Anne Banks Pidduck, John Mylopoulos, Carson C. Woo, M.T. Ozsu, 2003-08-01 The explosive growth of the Internet and the Web have created an ever growing demand for information systems and ever growing challenges for Information Systems Engineering The series of Conferences on Advanced Information Systems Engineering CAiSE was launched in Scandinavia by Janis Bubenko and Arne Solvberg in 1989 became an important European conference and was held annually in major European sites throughout the 1990s Now in its 14th year CAiSE was held for the first time outside Europe showcasing international research on information systems and their engineering Not surprisingly this year the conference enjoyed unprecedented attention In total the conference received 173 paper submissions the highest number ever for a CAiSE conference Of those 42 were accepted as regular papers and 26 as short poster papers In addition the conference received 12 proposals for workshops of which 8 were approved while 4 tutorials

were selected from 15 submissions The technical program was put together by an international committee of 81 experts In total 505 reviews were submitted with every member of the committee contributing

Decisions on all submissions were reached at a program committee meeting in Toronto on January 26 27 2002 Workshop and tutorial proposals were handled separately by committees chaired by Patrick Martin workshops and Jarek Gryz and Richard Paige tutorials We wish to extend a great THANK YOU to all members of the program and organizing committees for their volunteer contributions of time and expertise The fact that so many busy and famous people took the trouble to help us with the organization of this conference and the formation of its technical program speaks well for the future of CAiSE and the field of Information Systems Engineering

Data Mining Jiawei Han, Jian Pei, Hanghang Tong, 2022-07-02. *Data Mining: Concepts and Techniques*, Fourth Edition, introduces concepts, principles, and methods for mining patterns, knowledge, and models from various kinds of data for diverse applications. Specifically, it delves into the processes for uncovering patterns and knowledge from massive collections of data, known as knowledge discovery from data or KDD. It focuses on the feasibility, usefulness, effectiveness, and scalability of data mining techniques for large data sets. After an introduction to the concept of data mining, the authors explain the methods for preprocessing, characterizing, and warehousing data. They then partition the data mining methods into several major tasks: introducing concepts and methods for mining frequent patterns, associations, and correlations for large data sets; data classification and model construction; cluster analysis and outlier detection. Concepts and methods for deep learning are systematically introduced as one chapter. Finally, the book covers the trends, applications, and research frontiers in data mining. Presents a comprehensive new chapter on deep learning, including improving training of deep learning models, convolutional neural networks, recurrent neural networks, and graph neural networks. Addresses advanced topics in one dedicated chapter: data mining trends and research frontiers, including mining rich data types, text, spatiotemporal data, and graph networks; data mining applications, such as sentiment analysis, truth discovery, and information propagation; data mining methodology and systems; and data mining and society. Provides a comprehensive practical look at the concepts and techniques needed to get the most out of your data. Visit the author-hosted companion site: <https://hanj.cs>

Description Logic Rules M. Krötzsch, 2010-10-11 Ontological modelling today is applied in many areas of science and technology including the Semantic Web The W3C standard OWL defines one of the most important ontology languages based on the semantics of description logics An alternative is to use rule languages in knowledge modelling as proposed in the W3C s RIF standard So far it has often been unclear how to combine both technologies without sacrificing essential computational properties This book explains this problem and presents new solutions that have recently been proposed Extensive introductory chapters provide the necessary background for understanding the goals and challenges of this field whereas advanced chapters discuss novel solutions in full detail Enriched knowledge representation languages that are introduced include DL Rules Horn description logics and DL safe Rules In each of these cases emphasis is put on finding a favourable trade off between expressiveness and computational complexity This naturally leads to the light weight DL rule language ELP which illustrates that expressive ontological modelling and tractable inferencing can indeed go together Comprehensive references for further reading are provided throughout the book
