Solidification and Crystallization Processing in Metals and Alloys Hasse Fredriksson, Ulla Åkerlind, 2012-08-13
Solidification and Crystallization Processing in Metals and Alloys Hasse Fredriksson KTH Royal Institute of Technology Stockholm Sweden Ulla Åkerlind University of Stockholm Sweden Solidification or crystallization occurs when atoms are transformed from the disordered liquid state to the more ordered solid state and is fundamental to metals processing. Conceived as a companion volume to the earlier works *Materials Processing during Casting* 2006 and *Physics of Functional Materials* 2008, this book analyzes solidification and crystallization processes in depth. Starting from the thermodynamic point of view, it gives a complete description taking into account kinetics and mass transfer down to the final structure. Importantly, the book shows the relationship between the theory and the experimental results. Topics covered include Fundamentals of thermodynamics, Properties of interfaces, Nucleation, Crystal growth in vapours, liquids and melts, Heat transport during solidification processes, Solidification structures: faceted, dendritic, eutectic and peritectic, Metallic glasses and amorphous alloy melts. *Solidification and Crystallization Processing in Metals and Alloys* features many solved examples in the text and exercises with answers for students. Intended for Masters and PhD students as well as researchers in Materials Science, Engineering, Chemistry and Metallurgy, it is also a valuable resource for engineers in industry.

TMS 2014 143rd Annual Meeting & Exhibition, Annual Meeting Supplemental Proceedings The Minerals, Metals & Materials Society (TMS), 2016-12-16 These papers present advancements in all aspects of high temperature electrochemistry from the fundamental to the empirical and from the theoretical to the applied. Topics involving the application of electrochemistry to the nuclear fuel cycle, chemical sensors, energy storage, materials synthesis, refractory metals and their alloys, and alkali and alkaline earth metals are included. Also included are papers that discuss various technical, economic and environmental issues associated with plant operations and industrial practices.

Solidification processing: theoretical and experimental investigations of solidification processes including castings, solidification, directional solidification of alloys, electromagnetic stirring, ultrasonic cavitation, mechanical vibration, active cooling and heating, powder bed electron beam melting, additive manufacturing etc. for processing of metals, polymers and composite materials. 2. Microstructure Evolution: theoretical and experimental studies related to microstructure evolution of materials including prediction of solidification related defects and particle pushing/engulfment aspects. 3. Novel Casting and Molding Processes: modeling and experimental aspects including high pressure die casting, permanent casting, centrifugal casting, low pressure casting, 3D silica sand mold printing etc. and 4. Cast Iron: all aspects related to cast iron characterization, computational and analytical modeling and
