Mathematical Formulas for Economists Bernd Luderer, Volker Nollau, Klaus Vettters, 2013-06-29 This collection of formulas constitutes a compendium of mathematics for economics and business. It contains the most important formulas, statements, and algorithms in this significant subfield of modern mathematics and addresses primarily students of economics or business at universities, colleges, and trade schools. But people dealing with practical or applied problems will also find this collection to be an efficient and easy-to-use work of reference. First, the book treats mathematical symbols and constants, sets, and statements, number systems, and their arithmetic, as well as fundamentals of combinatorics. The chapter on sequences and series is followed by mathematics of finance, the representation of functions of one and several independent variables, their differential and integral calculus, and by differential and difference equations. In each case, special emphasis is placed on applications and models in economics. The chapter on linear algebra deals with matrices, vectors, determinants, and systems of linear equations. This is followed by the representation of structures and algorithms of linear programming. Finally, the reader finds formulas on descriptive statistics, data analysis, ratios, inventory, and time series analysis, on probability theory, events, probabilities, random variables, and distributions, and on inductive statistics, point and interval estimates, tests. Some important tables complete the work. *Business Books and Serials in Print*, 1977 *The British National Bibliography* Arthur James Wells, 2007 **Risk Measures and Insurance Solvency Benchmarks** Vsevolod K. Malinovskii, 2021-07-21 Risk Measures and Insurance Solvency Benchmarks: Fixed Probability Levels in Renewal Risk Models is written for academics and practitioners who are concerned about potential weaknesses of the Solvency II regulatory system. It is also intended for readers who are interested in pure and applied probability, have a taste for classical and asymptotic analysis, and are motivated to delve into rather intensive calculations. The formal prerequisite for this book is a good background in analysis. The desired prerequisite is some degree of probability training, but someone with knowledge of the classical real variable theory, including asymptotic methods, will also find this book interesting. For those who find the proofs too complicated, it may be reassuring that most results in this book are formulated in rather elementary terms. This book can also be used as reading material for basic courses in risk measures, insurance mathematics, and applied probability. The material of this book was partly used by the author for his courses in several universities in Moscow, Copenhagen University, and in the University of

Montreal Features Requires only minimal mathematical prerequisites in analysis and probability Suitable for researchers and postgraduate students in related fields Could be used as a supplement to courses in risk measures insurance mathematics and applied probability

Money and Mathematics Ralf Korn,Bernd Luderer,2021-10-26 This book follows a conversational approach in five dozen stories that provide an insight into the colorful world of financial mathematics and financial markets in a relaxed accessible and entertaining form The authors present various topics such as returns real interest rates present values arbitrage replication options swaps the Black Scholes formula and many more The readers will learn how to discover analyze and deal with the many financial mathematical decisions the daily routine constantly demands The book covers a wide field in terms of scope and thematic diversity Numerous stories are inspired by the fields of deterministic financial mathematics option valuation portfolio optimization and actuarial mathematics The book also contains a collection of basic concepts and formulas of financial mathematics and of probability theory Thus also readers new to the subject will be provided with all the necessary information to verify the calculations
