for future research and educational practice both of which need to go beyond individual opinions and convictions

**Education in a Federal UK** John Furlong, Ingrid

Lunt,2019-10-23 Britain's two recent referenda on Brexit 2016 and on Scottish independence 2014 have raised in the public mind fundamental questions about the future of the UK. It seems that for the first time the public, the media, and the political elite have woken up to the fact that in different parts of the UK there are different histories, different aspirations, and different imagined futures in relation to a whole range of vitally important political issues. But what the public debate often fails to recognise is that in many areas of public life, perhaps especially education, the UK is already a federal state and in key respects has been so for many years. The aim of this volume is therefore to take stock to try and capture what the current state of educational policy and practice is across the whole of the UK. This has been achieved by commissioning two different papers from each of the four countries: Wales, Scotland, Northern Ireland, and England. The first is an overview exploring the distinctive history, principles, and current policies of each country. The second paper has been specifically chosen as a case study of a key policy that highlights the distinctiveness of each country: the Foundation Phase for Wales, assessment policy in Scotland, shared education initiatives in Northern Ireland, and higher education policy in England. Taken together, these eight papers give an important insight into the complexities of educational policy and practice across the whole of the UK today. This volume was originally published as a special issue of *Oxford Review of Education*. [Political Pressures on Educational and Social Research](#)

Karen Trimmer,2016-05-12 *Political Pressures on Educational and Social Research* draws upon a variety of theoretical and methodological approaches to consider the problems that can arise when research findings diverge from political directions for policy. Chapters explore the impacts this can have on the researchers, as well as the influence it has on the research, including the methodology and the publication of results. The book offers innovative ways of seeing how these connect, overlap, and interact, revealing particular issues of concern for researchers and evaluators in the context of research internationally. Key topics include the power and positioning of research, evidence-based policy development, ethics, and the importance of research that seeks to explore and discover knowledge. The book is divided into two sections. The first presents chapters from international academics which provide a theoretical underpinning and discussion of power, policy, ethics, and their influence on research, resourcing, autonomy, purpose, and methodology. The second section explores specific case studies and instances from the authors' own experiences in the field. This book offers an interesting and enlightening insight into the sometimes political nature of research and will appeal to researchers, evaluators, and postgraduate students in the fields of education and the social sciences. It will be of particular interest to those studying research methods. *Cracking the Common Core*
