**Quality Research in Literacy and Science Education** Mack C. Shelley, Larry D. Yore, Brian B. Hand, 2008-12-30 Statistical models attempt to describe and quantify relationships between variables In the models presented in this chapter there is a response variable sometimes called dependent variable and at least one predictor variable sometimes called independent or explanatory variable When investigating a possible cause and effect type of relationship the response variable is the putative effect and the predictors are the hypothesized causes Typically there is a main predictor variable of interest other predictors in the model are called covariates Unknown covariates or other independent variables not controlled in an experiment or analysis can affect the dependent or outcome variable and mislead the conclusions made from the inquiry Bock Velleman given the model  $p$  is the probability that a relationship is seen by mere chance The smaller the  $p$  value the more confident we can be that the pattern seen in the data is not random In the type of models examined here the  $R$  measures the proportion of the variation in the response variable that is explained by the predictors specified in the model if  $R$  is close to 1 then almost all the variation in the response variable has been explained This measure is also known as the multiple correlation coefficient Statistical studies can be grouped into two types experimental and observational

**Modeling Individual Differences in Perceptual Decision Making** Joseph W. Houpt, Cheng-Ta Yang, James T. Townsend, 2017-01-18 To deal with the abundant amount of information in the environment in order to achieve our goals human beings adopt a strategy to accumulate some information and filter out other information to ultimately make decisions Since the development of cognitive science in the 1960s researchers have been interested in understanding how human beings process and accumulate information for decision making Researchers have conducted extensive behavioral studies and applied a wide range of modeling tools to study human behavior in simple detection tasks and two choice decision tasks e.g. discrimination classification In general researchers often assume that the manner in which information is processed for decision making is

invariant across individuals given a particular experimental context Independent variables including speed accuracy instructions stimulus properties i e intensity and characteristics of the participants i e aging cognitive ability are assumed to affect the parameters in a model i e speed of information accumulation response bias but not the way that participants process information e g the order of information processing Given these assumptions much modeling has been accomplished based on the grouped data rather than the individual data However a growing number of studies have demonstrated that there were individual differences in the perceptual decision process In the same task context different groups of the participants may process information in different manners The capacity and architecture of the decision mechanism were found to vary across individuals implying that humans decision strategies can vary depending on the context to maximize their performance In this special issue we focused on a particular subset of cognitive models particularly accumulator models multinomial processing trees and systems factorial technology SFT as applied to perceptual decision making The motivation for the focus on perceptual decision making is threefold Empirical studies of perception have grown out of a history of making a large number of observations for each individual so as to achieve precise estimates of each individual s performance This type of data rather than a small number of observations per individual is most amenable to achieving precision in individual level and group level cognitive modeling Second the interaction between the acquisition of perceptual information and the decisions based on that information to the extent that those processes are distinguishable offers rich data for scientific exploration Finally there is an increasing interest in the practical application of individual variation in perceptual ability whether to inform perceptual training and expertise or to guide personnel decisions Although these practical applications are beyond the scope of this issue we hope that the research presented herein may serve as the foundation for future endeavors in that domain

**Performance Plan** Mpumalanga (South Africa). Department of Education, 2013 Dilemmas of Educational Ethics Meira Levinson, Jacob Fay, 2019-01-02 Educators and policy makers confront challenging questions of ethics justice and equity on a regular basis Should teachers retain a struggling student if it means she will most certainly drop out Should an assignment plan favor middle class families if it means strengthening the school system for all These everyday dilemmas are both utterly ordinary and immensely challenging yet there are few opportunities and resources to help educators think through the ethical issues at stake Drawing on research and methods developed in the Justice in Schools project at the Harvard Graduate School of Education Dilemmas of Educational Ethics introduces a new interdisciplinary approach to achieving practical wisdom in education one that honors the complexities inherent in educational decision making and encourages open discussion of the values and principles we should collectively be trying to realize in educational policy and practice At the heart of the book are six richly described realistic accounts of ethical dilemmas that have arisen in education in recent years paired with responses written by noted philosophers empirical researchers policy makers and practitioners including Pedro Noguera Howard Gardner Mary Pattillo Andres A Alonso Jamie Ahlberg Toby N Romer and Michael J Petrilli The editors illustrate how readers can use and adapt these cases and commentaries in schools and other settings in order to reach a difficult decision deepen their own understanding or to build teams around shared values Cyber Threat Chris

Bronk, 2016-02-01 This book presents a holistic view of the geopolitics of cyberspace that have arisen over the past decade utilizing recent events to explain the international security dimension of cyber threat and vulnerability and to document the challenges of controlling information resources and protecting computer systems How are the evolving cases of cyber attack and breach as well as the actions of government and corporations shaping how cyberspace is governed What object lessons are there in security cases such as those involving Wikileaks and the Snowden affair An essential read for practitioners scholars and students of international affairs and security this book examines the widely pervasive and enormously effective nature of cyber threats today explaining why cyber attacks happen how they matter and how they may be managed The book addresses a chronology of events starting in 2005 to comprehensively explain the international security dimension of cyber threat and vulnerability It begins with an explanation of contemporary information technology including the economics of

contemporary cloud mobile and control systems software as well as how computing and networking principally the Internet are interwoven in the concept of cyberspace Author Chris Bronk PhD then documents the national struggles with controlling information resources and protecting computer systems The book considers major security cases such as Wikileaks Stuxnet the cyber attack on Estonia Shamoon and the recent exploits of the Syrian Electronic Army Readers will understand how cyber security in the 21st century is far more than a military or defense issue but is a critical matter of international law diplomacy commerce and civil society as well

**Constructing Allied Cooperation** Marina E. Henke, 2019-10-15 How do states overcome problems of collective action in the face of human atrocities terrorism and the threat of weapons of mass destruction How does international burden sharing in this context look like between the rich and the poor the big and the small These are the questions Marina E Henke addresses in her new book Constructing Allied Cooperation Through qualitative and quantitative analysis of 80 multilateral military coalitions Henke demonstrates that coalitions do not emerge naturally Rather pivotal states deliberately build them They develop operational plans and bargain suitable third parties into the coalition purposefully using their bilateral and multilateral diplomatic connections what Henke terms diplomatic embeddedness as a resource As Constructing Allied Cooperation shows these ties constitute an invaluable state capability to engage others in collective action they are tools to construct cooperation Pulling apart the strategy behind multilateral military coalition building Henke looks at the ramifications and side effects as well As she notes via these ties pivotal states have access to private information on the deployment preferences of potential coalition participants Moreover they facilitate issue linkages and side payments and allow states to overcome problems of credible commitments Finally pivotal states can use common institutional contacts IO officials as cooperation brokers and they can convert common institutional venues into fora for negotiating coalitions The theory and evidence presented by Henke force us to revisit the conventional wisdom on how cooperation in multilateral military operations comes about The author generates new insights with respect to who is most likely to join a given multilateral intervention what factors influence the strength and capacity of individual coalitions and what diplomacy and diplomatic ties are good for Moreover as the Trump administration promotes an America First policy and withdraws from international agreements and the United Kingdom completes Brexit Constructing Allied Cooperation is an important

reminder that international security cannot be delinked from more mundane forms of cooperation multilateral military coalitions thrive or fail depending on the breadth and depth of existing social and diplomatic networks

*Improving Teaching, Learning, Equity, and Success in Gateway Courses* Andrew K. Koch, 2018-01-22 As long as there have been U S colleges and universities there have been entry courses that pose difficulties for students courses that have served more as weeding out rather than gearing up experiences for undergraduates This volume makes the case that the weed out dynamic is no longer acceptable if it ever was Contemporary postsecondary education is characterized by vastly expanded access for historically underserved populations of students and this new level of access is coupled with increased scrutiny of retention and graduation outcomes Chapters in this volume define and explore issues in gateway courses and provide various examples of how to improve teaching learning and outcomes in these foundational components of the undergraduate experience This is the 180th volume of the Jossey Bass quarterly report series New Directions for Higher Education Addressed to presidents vice presidents deans and other higher education decision makers on all kinds of campuses it provides timely information and authoritative advice about major issues and administrative problems confronting every institution

**Transforming the Gateway Course Experience** Andrew K. Koch, 2024-12-13 Serving as a call to action for educators to recognize and address inequities in gateway courses this book offers an evidence based model for improving teaching learning and student success within the foundational college classroom Gateway courses often reflect broader societal cultural and economic issues this book argues that inequitable outcomes result from specific practices and policies rather than occurring naturally Using data and examples from his work with various colleges and universities Andrew K Koch highlights the systemic issues that perpetuate inequality in higher education He examines how and why race and class divisions are reinforced through current practice and the impact that these courses have on students sense of belonging By giving suggestions for policy changes on how to combat high failure rates and challenging myths such as grade inflation and curve grading this text seeks to critique and ultimately dismantle the toxic culture of weeding out students This accessible book is for any college instructor who wants to transform gateway courses into true opportunities for student success ultimately advancing higher education s broader equity and social justice goals
