

At $k = -1$, $x = 4(-1)^2 - 1 = 4 - 1 = 3$, is not divisible by 8.

At $k = 0$, $x = 4(0)^2 - 1 = 0 - 1 = -1$, is not divisible by 8

Let us assume that $n = \text{odd}$:

So, when $n = \text{odd}$ i.e., $n = 2k + 1$, where k is an integer,

We get,

$$\Rightarrow x = 2k + 1$$

$$\Rightarrow x = (2k+1)^2 - 1$$

$$\Rightarrow x = 4k^2 + 4k + 1 - 1$$

$$\Rightarrow x = 4k^2 + 4k$$

$$\Rightarrow x = 4k(k+1)$$

At $k = -1$, $x = 4(-1)(-1+1) = 0$ which is divisible by 8.

At $k = 0$, $x = 4(0)(0+1) = 0$ which is divisible by 8.

At $k = 1$, $x = 4(1)(1+1) = 8$ which is divisible by 8.

From the above two observation, we can conclude that, if n is odd, $n^2 - 1$ is divisible by 8.

Hence, option (C) is the correct answer.

4. If the HCF of 65 and 117 is expressible in the form $65m - 117$, then the value of m is

(A) 4 (B) 2

(C) 1 (D) 3

Solution:

(B) 2

Explanation:

Let us find the HCF of 65 and 117,

$$117 = 1 \times 65 + 52$$

$$65 = 1 \times 52 + 13$$

$$52 = 4 \times 13 + 0$$

Hence, we get the HCF of 65 and 117 = 13.

According to the question,

$$65m - 117 = 13$$

$$65m = 117 + 13 = 130$$

$$\therefore m = 130/65 = 2$$

Hence, option (B) is the correct answer.

5. The largest number which divides 70 and 125, leaving remainders 5 and 8, respectively, is

(A) 13 (B) 65

(C) 875 (D) 1750

Solution:

(A) 13

Explanation:

According to the question,

We have to find the largest number which divides 70 and 125, leaving remainders 5 and 8.

Palumbo, Stefania D'Ascenzo, Luca Tommasi, 2017-04-28 Aftereffects generally occur after a prolonged exposure adaptation to a first stimulus possessing one given property followed by presentation of a stimulus bearing a neutral value of that property The aftereffect consists in a change in appearance of the neutral stimulus following the adapter compared to the appearance of the neutral stimulus when it is perceived without any previous exposure to the adapter The transient phenomena of perceptual aftereffects are believed to depend on the activation of neuron populations that respond selectively to a given property of the stimuli Studying how adaptation occurs which stimulus properties are sensitive to it which timings are necessary whether individual differences modulate its occurrence has thus become an indirect way to probe the plasticity of sensory functions in the nervous system recently extending to more cognitive and representational aspects of neural coding In the last two decades indeed it has been demonstrated that aftereffects occur not only for low level properties of stimuli such as motion color or orientation but also for high level properties Many studies have proven that high level properties of the stimuli e.g. gender identity ethnicity or age of a face or a voice are sensitive to this phenomenon It has been shown for example that the prolonged exposure to a female or male face produces a gender misperception in the opposite direction when an androgynous face is shown after the adapter Furthermore recent studies have also shown that aftereffects are not strictly contingent upon the physical features that make up stimuli but they seem to run across the high level properties subjects are adapted to These evidences are supported by cross category adaptation studies which underlie how aftereffects occur even across stimuli that do not share physical features e.g. bodies and faces but that instead share common higher level properties such as gender Given the growing body of research focused on adaptation and aftereffects in high level perception at the boundaries with perceptual learning attention and cognition the purpose of this topic is to provide a picture of the state of the art relative to the specific phenomena of adaptation in high level perceptual processing **ISC Mathematics Class XII (2021 Edition)** ANUBHUTI GANGAL, S Chand's ISC Mathematics is structured according to the latest syllabus as

Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics

Teachers Nicholas H. Wasserman, 2018-12-12 Secondary mathematics teachers are frequently required to take a large number of mathematics courses including advanced mathematics courses such as abstract algebra as part of their initial teacher preparation program and or their continuing professional development The content areas of advanced and secondary mathematics are closely connected Yet despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics including why and in what ways they may be important for secondary teachers Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics
