Discursivity, Relationality and Materiality in the Life of the Organisation Colleen E. Mills, Francois Cooren, 2019-10-23 The field of organisational communication has been rapidly transforming in the wake of the linguistic and discursive turns that have been sweeping across the social sciences since the mid eighties These turns have prompted organisational communication scholars to look more closely at how they think about communication and its relationship to the organisation and the process of organizing What has emerged from these reflections is a perspective that proposes communication is not merely something that happens in organisations but is the heart of organizing and therefore actually constitutes the organisation This perspective which embraces several sub threads is now commonly referred to as the CCO Communication as Constitutive of Organisation perspective This is itself evolving as scholars come to realize that organizing does not just occur at the discursive level It is inextricably coupled to the material and relational aspects of work the discourse mutually constitutes relationships between human and non human bodies that combine to create what we encounter when we participate in organisational life This book examines the way these three dimensions combine to create organisational outcomes In doing so it advances CCO and sociomateriality scholarship and contributes to new ways of thinking about strategy and practice The series of empirical studies should interest the widely interdisciplinary audience that seeks to understand work organizing and management This book was originally published as a special issue of the Communication Research and Practice journal

Materiality and Space Nathalie Mitev,Francois-Xavier de Vaujany,2013-08-09 Materiality and Space focuses on how organizations and managing are bound with the material forms and spaces through which humans act and interact at work It concentrates on organizational practices and pulls together three separate domains that are rarely looked at together sociomateriality sociology of space and social studies of technology The contributions draw on and combine several of these domains and propose analyses of spaces and materiality in a range of organizational practices such as collaborative workspaces media work urban management e learning environments managerial control mobile lives institutional routines and professional identity Theoretical insights are also developed by Pickering on the material world Lyytinen on affordance Lorino on architecture and Introna on sociomaterial assemblages in order to delve further into conceptualizing materiality in organizations *Material Practice and Materiality: Too Long Ignored in Science Education* Catherine Milne,Kathryn Scantlebury,2019-04-11 In this book various scholars explore the material in science and science education and its role in scientific practice such as those practices that are key to the curriculum focuses of science education programs in a number of countries As a construct culture can be understood as material and social practice This definition is useful for informing researchers nuanced explorations of the nature of science and inclusive decisions about the practice of science education Sewell 1999 As fields of material social practice and worlds of meaning cultures are contradictory contested and weakly bounded The notion of culture as material social practices leads researchers to accept that material practice is as important as conceptual development social practice However in education and science education there is a tendency to ignore material practice and to focus on social practice with language as the arbiter of such social practice Often material practice such as those associated with scientific instruments and other apparatus is ignored with instruments understood as inscription devices conduits for language rather than sources of material culture in which scientists share material other than words Baird 2004 p 7 when they communicate new knowledge and realities While we do not ignore the role of language in science we agree with Barad 2003 that perhaps language has too much power and with that power there seems a concomitant loss of

Organization Theories in the Making Linda Rouleau, 2022-08-25. Organization Theories in the Making aims to demonstrate how over the last 25 years the field of organization theories (OTs) has been providing stimulating, thoughtful, and innovative perspectives. The book offers a selective immersion in organizational institutionalism, convention analysis, network analysis, knowledge studies, discourse studies, and practice studies. For each of these perspectives, the book explores its different research streams and zooms in on the research communities that give rise to them. In addition, it highlights how these perspectives all intersect with each other to form a mosaic of ideas that define today's organizations. Rouleau also invites graduate students and early career researchers to learn how recent theories view and portray the organization and more specifically to understand current research questions, conceptual resources, and methods. A deep knowledge of recent OTs is key when building a compelling literature review and making meaningful theoretical contributions. This book offers readers with the opportunity to develop their theory-building skills and more by taking a deep dive in the complexities and controversies of OTs. The main arguments of each perspective are illustrated by specific exemplars from academic journals. Each chapter contains a synoptic table summarizing the main scholarly components within each perspective and its research substreams.

The Agency of Organizing Boris H. J. M. Brummans, 2017-09-13. Winner of the 2018 Outstanding Edited Book Award from the Organizational Communication Division of the National Communication Association, The Agency of Organizing explains why the notion of agency is central to understanding what organizations are, how they come into existence, continue to exist or fade away, and how they function. Written by leading organizational communication scholars, the chapters in this edited volume present seven different theoretical perspectives on agency in the dynamics of organizing. Authors discuss how they conceptualize agency from their own perspective and how they propose to investigate agency empirically in processes of organizing by using specific methods. Through insightful case studies, they demonstrate the value of these perspectives for organizational research and practice.
