

NOTE TO THE TEACHER

More examples may be given to emphasize an interpretation of the negative sign as a direction to the left of the number line.

We now have the following generalization:

Adding a positive integer n to m means moving along the real line a distance of n units to the right from m . Adding a negative integer $-n$ to m means moving along the real line a distance of n units to the left from m .

NOTE TO THE TEACHER

Other objects might be used in this next activity. Signed tiles could be algebra tiles or counters with different colors on each side. Bottle caps are easily obtained and will be very good visual and hands-on materials.

B. Addition Using Signed Tiles

This is another device that can be used to represent integers. The tile $\boxed{+}$ represents integer 1, the tile $\boxed{-}$ represents -1, and the flexible $\boxed{+ -}$ represents 0.

Recall that a number and its negative cancel each other under the operation of addition. This means

$4 + (-4) = 0$

$15 + (-15) = 0$

$(-29) + 29 = 0$

In general, $n + (-n) = (-n) + n = 0$.

NOTE TO THE TEACHER

Get the students to model the above equations using signed tiles or colored counters.
