

## EUCLIDEAN GEOMETRY PROOFS GR 11 THEOREMS

### THEOREM 1(A)

The perpendicular drawn from the centre of a circle to a chord bisects the chord.

**Theorem 1 in a nutshell** according to the given circle sketched below:

If  $OM \perp AB$  (which means that  $\hat{M}_1 = \hat{M}_2 = 90^\circ$ ) then  $AM = MB$

**Given:** Circle with centre O with  
 $OM \perp AB$ . AB is a chord

**Required to prove:**  $AM = MB$ .

#### Proof

Join OA and OB.

In  $\triangle OAM$  and  $\triangle OBM$ :

- |     |  |       |        |
|-----|--|-------|--------|
| (a) | $OA = OB$                                  | ..... | radii  |
| (b) | $\hat{M}_1 = \hat{M}_2 = 90^\circ$         | ..... | given  |
| (c) | $OM = OM$                                  | ..... | common |
|     | $\therefore \triangle OAM = \triangle OBM$ | ..... | RHS    |
|     | $\therefore AM = MB$                       |       |        |

### THEOREM 5

The opposite angles of a cyclic quadrilateral are supplementary (add up to  $180^\circ$ )  
 (opp  $\angle$ 's cyclic quad)

**Given:** A, B, C and D are points that lie on  
 the circumference of the circle  
 (ABCD is a cyclic quadrilateral)

**Required to prove:**  $\hat{A} + \hat{C} = 180^\circ$  and  
 $\hat{B} + \hat{D} = 180^\circ$

#### Proof

Join AO and OC.

$$\hat{O}_1 = 2\hat{D} \quad \text{.....} \quad \angle \text{ at centre} = 2 \times \angle \text{ at Circumference}$$

$$\hat{O}_2 = 2\hat{B} \quad \text{.....} \quad \angle \text{ at centre} = 2 \times \angle \text{ at circumference}$$

$$\hat{O}_1 + \hat{O}_2 = 2\hat{D} + 2\hat{B}$$

$$\text{And } \hat{O}_1 + \hat{O}_2 = 360^\circ \quad \text{.....} \quad \angle \text{'s at a point}$$

$$\therefore 360^\circ = 2(\hat{D} + \hat{B})$$

$$\therefore 180^\circ = \hat{D} + \hat{B}$$

Similarly, by joining BO and DO, it can be proven that  $\hat{A} + \hat{C} = 180^\circ$

**Mathematics Education: Programs And Practices** Bruce R Vogeli, Alexander Karp, 2011-03-31 This anthology consisting of two volumes is intended to equip background researchers, practitioners and students of international mathematics education with intimate knowledge of mathematics education in Russia. Volume I entitled Russian Mathematics Education History and World Significance consists of several chapters written by distinguished authorities from Russia, the United States and other nations. It examines the history of mathematics education in Russia and its relevance to mathematics education throughout the world. The second volume entitled Russian Mathematics Education Programs and Practices will examine specific Russian programs in mathematics, their impact and methodological innovations. Although Russian mathematics education is highly respected for its achievements and was once very influential internationally, it has never been explored in depth. This publication does just that. **Uncovering Student Thinking About Mathematics in the**

*Visualisation and Epistemological Access to Mathematics Education in Southern Africa* Marc Schäfer, 2023-04-27 This book demonstrates that using visualisation processes in mathematics education can help to enhance teaching and learning and bridge the inequality gap that exists between well-resourced and under-resourced schools in Southern Africa. Drawing on classroom research conducted in the Southern African region, it examines how epistemological access in a context of gross inequality can be constructively addressed by providing research-based solutions and recommendations. The book outlines

the visualisation process as an integral but often overlooked process of mathematics teaching and learning It goes beyond the traditional understanding of visualisation processes such as picture forming and using tools and considers visualisation processes that are semiotic in nature and includes actions such as gestures in combination with language It adds value to the visualisation in mathematics education research discourse and deliberation in Africa With a unique focus on Southern Africa and open avenues for further research and collaboration in the region it will be a highly relevant reading for researchers academics and post graduate students of mathematics education comparative education and social justice education

*Encyclopaedia of Mathematics* Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques
