1) Controlled Unclassified Information

- Unclassified – the default designation for information that can be released to persons without a clearance.
- Confidential – the lowest classification level. It is defined as information that would “damage” national security if disclosed.
- Secret – the second highest classification level. It is defined as information that would “seriously damage” national security if disclosed.
- Top Secret – the highest classification level. It is defined as information that would cause “exceptionally grave damage” to national security if disclosed.

2) set up password protection

3) read and write permission

4) cacls C:\ERPdocuments\HRfiles AD_Group:MRX

5) add groups allows for easier setup and cleaner to navigate. Plus allows more permissions to be assigned not only to just the group but then you can have permission to the users account also.

6) The “Block Inheritance” feature is used to prevent Group policies set in a parent site, domain, or OU from being applied to the group using the feature.

7) The Security Groups allow permissions to be set for the members of the group. This keeps users from gaining access to files and folders that they do not have permission to access. Security Group filtering has two functions: to alter groups affected by a particular GPO and to delegate which group of administrators can modify the contents of the GPO.

8) It is the practice of limiting access to what is needed to function normally.

9) There is information within different sections that not everyone needs to know. The Data Classification Standard will help me limit access to the files to those who have a need-to-know.

10) Executive salaries and yearly bonuses. That information should be known only to those in finance and maybe HR who have to know the information because they are responsible for processing the payouts. If the information were shared throughout the business, it could cause anarchy.
