Rana, 2012-03-16 This book constitutes the refereed post proceedings of the 8th International Workshop on Economics of Grids Clouds Systems and Services GECON 2011 held in Paphos Cyprus in December 2011 The 9 revised full papers presented together with 5 work in progress papers were carefully reviewed and selected from 27 papers The papers are organized in topical sections on market mechanisms and negotiation cost models charging and trading platforms resource allocation scheduling and admission control and two work in progress sections risk assessment and economics of cloud services and cost aware adoption of cloud services *Mathematical Methods for Signal and Image Analysis and Representation* Luc Florack, Remco Duits, Geurt Jongbloed, Marie-Colette van Lieshout, Laurie Davies, 2012-01-12 Mathematical Methods for Signal and Image Analysis and Representation presents the mathematical

methodology for generic image analysis tasks In the context of this book an image may be any m dimensional empirical signal living on an n dimensional smooth manifold typically but not necessarily a subset of spacetime The existing literature on image methodology is rather scattered and often limited to either a deterministic or a statistical point of view In contrast this book brings together these seemingly different points of view in order to stress their conceptual relations and formal analogies Furthermore it does not focus on specific applications although some are detailed for the sake of illustration but on the methodological frameworks on which such applications are built making it an ideal companion for those seeking a rigorous methodological basis for specific algorithms as well as for those interested in the fundamental methodology per se Covering many topics at the forefront of current research including anisotropic diffusion filtering of tensor fields this book will be of particular interest to graduate and postgraduate students and researchers in the fields of computer vision medical imaging and visual perception

Intelligent Strategies for Pathway Mining Qingfeng

Chen, Baoshan Chen, Chengqi Zhang, 2013-12-17 This book is organized into thirteen chapters that range over the relevant approaches and tools in data integration modeling analysis and knowledge discovery for signaling pathways. Having in mind that the book is also addressed for students, the contributors present the main results and techniques in an easily accessed and understood way together with many references and instances. Chapter 1 presents an introduction to signaling pathway including motivations, background knowledge and relevant data mining techniques for pathway data analysis. Chapter 2 presents a variety of data sources and data analysis with respect to signaling pathway including data integration and relevant data mining applications. Chapter 3 presents a framework to measure the inconsistency between heterogeneous biological databases. A GO based genome ontology strategy is proposed to associate different data sources. Chapter 4 presents identification of positive regulation of kinase pathways in terms of association rule mining. The results derived from this project could be used when predicting essential relationships and enable a comprehensive understanding of kinase pathway interaction. Chapter 5 presents graphical model based methods to identify regulatory network of protein kinases. A framework using negative association rule mining is introduced in Chapter 6 to discover featured inhibitory regulation patterns and the relationships between involved regulation factors. It is necessary to not only detect the objects that exhibit a positive regulatory role in a kinase pathway but also to discover those objects that inhibit the regulation. Chapter 7 presents methods to model ncRNA secondary structure data in terms of stems, loops and marked labels and illustrates how to find matched structure patterns for a given query. Chapter 8 shows an interval based distance metric for computing the distance between conserved RNA secondary structures. Chapter 9 presents a framework to explore structural and functional patterns of RNA pseudoknot structure according to probability matrix. Chapter 10 presents methods to model miRNA data and identify miRNA interaction of cross species and within species. Chapter 11 presents an approach to measure the importance of miRNA site and the adjacent base by using information redundancy and develops a novel measure to identify strongly correlated infrequent itemsets. The discovered association rules not only present important structural features in miRNAs but also promote a comprehensive understanding of regulatory roles of miRNAs. Chapter 12 presents bioinformatics techniques for protein kinase data management and analysis, kinase pathways and drug targets and describes their potential application in pharmaceutical industry. Chapter 13 presents a summary of the chapters and gives a brief discussion to some emerging issues.
