The Origins of Visual Culture in the Islamic World Mohammed Hamdouni Alami,2015-04-17 In tenth century Iraq a group of Arab intellectuals and scholars known as the Ikhwan al Safa began to make their intellectual mark on the society around them A mysterious organisation the identities of its members have never been clear But its contribution to the intellectual thought philosophy art and culture of the era and indeed subsequent ones is evident In the visual arts for example Hamdouni Alami argues that the theory of human proportions which the Ikhwan al Safa propounded something very similar to those of da Vinci helped shape the evolution of the philosophy of aesthetics art and architecture in the tenth and eleventh centuries CE in particular in Egypt under the Fatimid rulers With its roots in Pythagorean and Neoplatonic views on the role of art and architecture the impact of this theory of specific and precise proportion was widespread One of the results of this extensive influence is a historic shift in the appreciation of art and architecture and their perceived role in the cultural sphere The development of the understanding of the interplay between ethics and aesthetics resulted in a movement which emphasised more abstract and pious contemplation of art as opposed to previous views which concentrated on the enjoyment of artistic works such as music song and poetry And it is with this shift that we see the change in art forms from those devoted to supporting the Umayyad caliphs and the opulence of the Abbasids to an art which places more emphasis on the internal concepts of reason and spirituality Using the example of Fatimid art and views of architecture including the first Fatimid mosque in al Mahdiyya Tunisia Hamdouni Alami offers analysis of the debates surrounding the ethics and aesthetics of the appreciation of Islamic art and architecture from a vital time in medieval Middle Eastern history and shows their similarity with aesthetic debates of Italian Renaissance

In Synchrony with the Heavens, Volume 2 Instruments of Mass Calculation David King, 2005-06-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices
