**Application of HACCP for Distribution System Protection** Kathy Martel,2006 OBJECTIVES The purpose of this project was to evaluate the application of the Hazard Analysis Critical Control Point HACCP system a risk management tool to better protect water quality in distribution systems BACKGROUND HACCP was first conceived in 1959 by the Pillsbury Company to improve food safety for NASA s manned space missions Since the 1980s HACCP has been widely adopted by the food and beverage industry worldwide where it forms an important part of their food safety plans Since the mid 1990s HACCP has been applied by a number of individual drinking water systems and has been incorporated into many drinking water regulatory requirements and guidelines around the globe HIGHLIGHTS Project pilot studies illustrated that HACCP can be applied to water distribution systems but time and resource requirements were greater than anticipated Project case studies showed that most utilities that achieved HACCP certification had first implemented ISO 9001 and ISO 14001 or similar systems to gain management control of people and processes The case study utilities operated one integrated management system including the ISO systems as well as HACCP to avoid duplication of tasks reduce staff time and costs and improve process integration All case study utilities believed that overall the benefits of the HACCP system outweighed the costs

**Water Policy in Canada** Mohammed H. Dore,2015-03-11 This book deals with the water policy and management in Canada It discusses various problems and risks in the fresh and drinking water supply in the second largest country in the world Mohammed Dore argues that water is underpriced and used wastefully in Canada In selected case studies he illustrates the major threats from human activity to Canadian freshwaters and drinking water resources including manufacturing mining oil sands production animal farming and agricultural use Selected case studies include reviews of even dramatic incidences e g the Walkerton tragedy of 2000 when 7 people were killed and 200 went onto permanent dialysis treatment because of water contamination with harmful pathogens The book warns that wastewater treatment standards are often not sufficient so that many drinking water resources are in peril of wastewater contamination As most of the water resources are provincial responsibility the book discusses the water management policies in the different provinces separately Through a detailed discussion and statistical analyses it can define water policy and management lessons that emerge from the investigated case studies It ends by contrasting water policy and practice in Canada with the practice in some European countries

*Institutional Governance and Regulation of Water Services* Michael J. Rouse,2013-09-14 Institutional Governance and

Regulation of Water Services aims to provide the key elements of policy governance and regulation necessary for sustainable water and sanitation services. On policy matters it covers important aspects including separation of policy and delivery, integrated planning, sustainable cost recovery provisions for the poor, and transparency. Regulation and Regulatory Bodies are presented in their various forms with discussion of why some form of independent scrutiny is essential for sustainability. The focus is on what works and what does not, based on consideration of basic principles and on case studies in both developing and developed countries. The early chapters discuss the key elements, with later chapters considering how these elements have come together in successful reforms of public sector operations. A chapter is devoted to the successful use of the private sector based on lessons learnt from failures of private contracts and the need for the application of sound procurement principles. The current trend is for a public sector model which benefits from business approaches, the so-called corporatised public utility. Experience since the publication of the first edition in 2007 reinforces the importance of the key elements for sustainable water services. This second edition brings the material up to date and with some increased emphasis on public participation in its many forms. It refers to the opportunity for progress provided by the UN Declaration of Water and Sanitation as a Human Right but only if it is implemented in a practical and sustainable way. Institutional Governance and Regulation of Water Services is aimed at providing an informative source for national and local governments responsible for water policy, for water utility managers, and for students who will be the policy makers of tomorrow. It is a teaching aid for courses on water policy governance and regulation. About the Author: Michael Rouse is a Distinguished Research Associate at the University of Oxford and manages the Institutional Governance and Regulation module of the University's MSc Course on Water Science Policy and Management. He was formerly Head of the Drinking Water Inspectorate in London and has extensive knowledge and experience of water governance and regulation, including all aspects of audit and enforcement and the governance issues related to both public sector management and privatisation. He has wide knowledge of water technical and operational matters based on his applied research and development background at the Water Research Centre where he spent 9 years as Managing Director. Michael has a good understanding of international water matters and advises governments on policy and regulation. He is a Past President of the International Water Association. He is a visiting professor at Tsinghua University in Beijing and at the Shanghai Academy of Social Science. In 2000 he was awarded the CBE Commander of the British Empire for his professional services.
