Advanced Design and Manufacturing Based on STEP Xun Xu, Andrew Yeh Ching Nee, 2009-09-29 Design and manufacturing is the essential element in any product development lifecycle Industry vendors and users have been seeking a common language to be used for the entire product development lifecycle that can describe design manufacturing and other data pertaining to the product Many solutions were proposed the most successful being the Standard for Exchange of Product model STEP STEP provides a mechanism that is capable of describing product data independent from any particular system The nature of this description makes it suitable not only for neutral file exchange but also as a basis for implementing sharing and archiving product databases ISO 10303 AP203 is the first and perhaps the most successful AP developed to exchange design data between different CAD systems Going from geometric data as in AP203 to features as in AP224 represents an important step towards having the right type of data in a STEP based CAD CAM system Of particular significance is the publication of STEP NC as an extension of STEP to NC utilising feature based concepts for CNC machining purposes The aim of this book is to provide a snapshot of the recent research outcomes and implementation cases in the field of design and manufacturing where STEP is used as the primary data representation protocol The 20 chapters are contributed by authors from most of the top research teams in the world These research teams are based in national research institutes industries as well as universities **Mastering the Nikon D7200** Darrell Young, 2015-12-31
