

1.3. Problem Description

The problem to be considered is shown schematically in *Figure 1.1* (p. 2). A cold fluid at 293.15 K flows into the pipe through a large inlet and mixes with a warmer fluid at 313.15 K that enters through a smaller inlet located at the elbow. The mixing elbow configuration is encountered in piping systems in power plants and process industries. It is often important to predict the flow field and temperature field in the area of the mixing region in order to properly design the junction.

Note

Because the geometry of the mixing elbow is symmetric, only half of the elbow needs to be modeled.

Developments on Computational Methods and Imaging in Biomechanics and Biomedical Engineering João Manuel R. S. Tavares, Paulo Rui Fernandes, 2019-07-26 This book gathers selected extended and revised contributions to the 15th International Symposium on Computer Methods in Biomechanics and Biomedical Engineering CMBBE2018 and the 3rd Conference on Imaging and Visualization which took place on 26-29 March 2018 in Lisbon Portugal. The respective chapters highlight cutting edge methods e.g. new algorithms, image analysis techniques and multibody modeling methods and new findings obtained by applying them in biological and/or medical contexts. Original numerical studies, Monte Carlo simulations, FEM analyses and reaction-diffusion models are described in detail together with intriguing new applications. The book offers a timely source of information for biologists, engineers, applied mathematicians and clinical researchers working on multidisciplinary projects and is also intended to foster closer collaboration between these groups.

Recent Advances in Urban Ventilation Assessment and Flow Modelling Riccardo Buccolieri, Jian Hang, 2019-04-23 This book contains twenty-one original papers and one review paper published by internationally recognized experts in the Atmosphere Special Issue *Recent Advances in Urban Ventilation Assessment and Flow Modelling* years 2017-2019. The Special Issue includes contributions on recent experimental and modelling works, techniques and developments mainly tailored to the assessment of urban ventilation on flow and pollutant dispersion in cities. The study of ventilation is of critical importance as it addresses the capacity with which a built urban structure is capable of replacing the polluted air with ambient fresh air. Here, ventilation is recognized as a transport process that improves local microclimate and air quality and closely relates to the term breathability. The efficiency with which street canyon ventilation occurs depends on the complex interaction between the atmospheric boundary layer flow and the local urban morphology. The individual contributions to this Issue are summarized and categorized into four broad topics: 1. outdoor ventilation efficiency and application; development of ventilation indices; 2. relationship between indoor and outdoor ventilation; 3. effects of urban morphology and obstacles to ventilation; and 4. ventilation modelling in realistic urban districts. The results and approaches presented and proposed will be of great interest to experimentalists and modelers and may constitute a starting point for the improvement of numerical simulations of flow and pollutant dispersion in the urban environment for the development of simulation tools and for the implementation of mitigation strategies.

Continuous Casting Michael Vynnycky, 2019-07-30 Continuous casting is an industrial process whereby molten metal is solidified into a semi-finished billet, bloom or slab for subsequent rolling in finishing mills. It is the most frequently used process to cast not only steel but also aluminium and copper alloys. Since its widespread introduction for steel in the 1950s, it has evolved to achieve improved yield, quality, productivity and cost efficiency. It allows lower cost production of metal sections with better quality due to the inherently lower costs of continuous standardized production of a product as well as providing increased control over the process through automation. Nevertheless, challenges remain and new ones appear as ways are sought to minimize casting defects and to cast alloys that could originally only be cast via other
