Island Life with a foreword by David Quammen and an extensive commentary by Lawrence R Heaney who has spent over three decades studying island biogeography in Southeast Asia makes this essential and foundational reference available and accessible once again Patterns of Vertebrate Biology E.W. Jr. Jameson,2012-12-06 This book grew from a series of lectures on vertebrate natural history The topics have been developed over a period of nearly 30 years and today scarcely resemble the original subject matter The progress is primarily technical Some concepts provide a synthetic framework for viewing much modern research but many of these concepts either date from Darwin or have developed from observations of later students Animal science courses follow a sequential pattern in which there are three discrete levels of undergraduate instruction Initially students study subject matter contained in such courses as biology and general zoology These courses introduce students to animal phylogeny basic plans of morphology and certain physiological aspects incidental to these subjects the student acquires a broad zoological vocabulary At the other end of the academic spectrum are courses that emphasize synthesis and theory evolution zoogeography behavior and ecology are important courses whose role is to explore the relationships of various aspects of the physical and biological world In these courses theory and analysis prevail They are not however essentially subject matter courses with distinct bodies of knowledge *Facing Extinction* Paul Donald,2010-08-16 Almost two hundred species of birds have become extinct in the past 400 years and a similar number today are in imminent danger of following them The world's conservationists are leading the fight to prevent the demise of these remaining critically endangered birds with a fair degree of success This new book examines the process and issues concerning extinction how and why it happens and what can be done about it Whilst man is to blame for many of the causes such as persecution and habitat loss species have become extinct on a regular basis since life began After several thought provoking introductory chapters the book showcases about 20 species on the brink of extinction from around the world and describes the work that is being undertaken to save them Some are success stories but a few are not This is a subject close to the hearts of all birders and ornithologists and this book written by a team of leading conservationists will strike a chord in most of them **African Islands** Peter Mitchell,2022-04-11 African Islands provides the first geographically and chronologically comprehensive overview of the archaeology of African islands This book draws archaeologically informed histories of African islands into a single synthesis focused on multiple issues of common interest among them human impacts on previously uninhabited ecologies the role of islands in the growth of long distance maritime trade networks and the functioning of plantation economies based on the exploitation of unfree labour Addressing and repairing the longstanding neglect of Africa in general studies of island colonization settlement and connectivity it makes a distinctively African contribution to studies of island archaeology The availability of this much needed synthesis also opens up a better understanding of the significance of African islands in the continent's past as a whole After contextualizing chapters on island archaeology as a field and an introduction to the variety of Africa's islands and the archaeological research undertaken

on them the book focuses on four themes arriving altering being and colonizing and resisting An interdisciplinary approach is taken to these themes drawing on a broad range of evidence that goes beyond material remains to include genetics comparative studies of the languages textual evidence and oral histories island ecologies and more African Islands provides an up to date synthesis and account of all aspects of archaeological research on Africa s islands for students and academics alike

Island Biogeography Robert J. Whittaker, José María Fernández-Palacios, Thomas J. Matthews, 2023-06-22 Island biogeography is the study of the distribution and dynamics of species in island environments Due to their isolation from more widespread continental species islands are ideal places for unique species to evolve but they are also places of concentrated extinction Consequently they are widely studied by ecologists evolutionary biologists and conservationists This accessible textbook builds on the success and reputation of its predecessors documenting the recent advances in this exciting field and explaining how islands have contributed to both theory development and testing In addition the book describes the main processes of island formation subsequent dynamics and eventual demise explaining the relevance of island environmental history to island biogeography The authors demonstrate the significance of islands as hotspots of biodiversity and of prehistoric and historic anthropogenic extinction Since island species continue to feature disproportionately in the lists of threatened species today the book examines both the chief threats to their persistence and some of the mitigation measures that can be put in play with conservation strategies specifically tailored to islands

Islands, Identity and the Literary Imagination Elizabeth McMahon, 2016-07-09 Australia is the planet's sole island continent This book argues that the uniqueness of this geography has shaped Australian history and culture including its literature Further it shows how the fluctuating definition of the island continent throws new light on the relationship between islands and continents in the mapping of modernity The book links the historical and geographical conditions of islands with their potent role in the imaginaries of European colonisation It prises apart the tangled web of geography fantasy desire and writing that has framed the Western understanding of islands both their real and material conditions and their symbolic power from antiquity into globalised modernity The book also traces how this spatial imaginary has shaped the modern man who is imagined as being the island's mirror The inter relationship of the island fantasy colonial expansion and the literary construction of place and history created a new man the dislocated and alienated subject of post colonial modernity This book looks at the contradictory images of islands from the allure of the desert island as a paradise where the world can be made anew to their roles as prisons as these ideas are made concrete at moments of British colonialism It also considers alternatives to viewing islands as objects of possession in the archipelagic visions of island theorists and writers It compares the European understandings of the first and last of the new worlds the Caribbean archipelago and the Australian island continent to calibrate the different ways these disparate geographies unified and fractured the concept of the planetary globe In particular it examines the role of the island in this process specifically its capacity to figure a graspable globe in the mind The book draws on the colonial archive and ranges across Australian literature from the first novel written and published in Australia by a convict on the island of Tasmania to both the ancient dreaming and the burgeoning literature of Aboriginal and Torres Strait Islanders in the twenty first century It discusses Australian literature in an international context drawing on the long traditions of literary islands across a range of cultures The book's approach is theoretical and engages with contemporary philosophy which uses the island and the archipelago as a key metaphor It is also historicist and includes considerable original historical research
