1. The first step is to identify the problem or question that needs to be answered.
 2. Next, gather relevant information and data from various sources.
 3. Then, analyze the information to identify patterns and trends.
 4. After that, develop a hypothesis or a proposed solution.
 5. Finally, test the hypothesis through experiments or further research.
 6. The results of the tests should be compared against the original hypothesis.
 7. If the results support the hypothesis, it is considered valid.
 8. If not, the hypothesis is rejected, and a new one is developed.
 9. The process is iterative, meaning it can be repeated as needed.
 10. The final outcome is a well-supported conclusion or solution.
