Essential Zebrafish Methods: Genetics and Genomics H. William Detrich III, Leonard I. Zon, Monte Westerfield, 2009-09-05 Due to its prolific reproduction and the external development of the transparent embryo the zebrafish is the prime model for genetic and developmental studies as well as research in genomics While genetically distant from humans nonetheless the vertebrate zebrafish has comparable organs and tissues that make it the model organism for study of vertebrate development This book one of two new volumes in the Reliable Lab Solutions series dealing with zebrafish brings together a robust and up to date collection of time tested methods presented by the world s leading scientists Culled from previously published chapters in *Methods in Cell Biology* and updated by the original authors where relevant it provides a comprehensive collection of protocols describing the most widely used techniques relevant to the study of zebrafish genetics and genomics The methods in this volume were hand selected by the editors whose goal was to provide a handy and cost effective collection of fail safe methods tips and tricks of the trade to both experienced researchers

and more junior members in the lab Provides busy researchers a quick reference for time tested methods and protocols that really work updated where possible by the original authors Gives pragmatic wisdom to the non specialist from experts in the field with years of experience with trial and error

Bifurcation and Chaos: Analysis, Algorithms, Applications
KÜPPER, SCHNEIDER, SEYDEL, TROGER, 2012-12-06 This volume contains the proceedings of a conference held in Würzburg August 20-24 1990 The theme of the conference was Bifurcation and Chaos Analysis Algorithms Applications More than 100 scientists from 21 countries presented 80 contributions Many of the results of the conference are described in the 49 refereed papers that follow The conference was sponsored by the Deutsche Forschungsgemeinschaft and by the Deutscher Akademischer Austauschdienst We gratefully acknowledge the support from these agencies The science of nonlinear phenomena is evolving rapidly Over the last 10 years the emphasis has been gradually shifting How trends vary may be seen by comparing these proceedings with previous ones in particular with the conference held in Dortmund 1986 proceedings published in ISNM 79 Concerning the range of phenomena chaos has joined the bifurcation scenarios As expected the acceptance of chaos is less emotional among professionals than it has been in some popular publications Analytical methods appear to have reached a state in which basic results of singularities symmetry groups or normal forms are everyday experience rather than exciting news Similarly numerical algorithms for frequent situations are now well established Implemented in several packages such algorithms have become standard means for attacking nonlinear problems The sophistication that analytical and numerical methods have reached supports the vigorous trend to more and more applications Pioneering equations as those named after Duffing Van der Pol or Lorenz are no longer exclusively the state of art
