This book provides a thorough description of hexapod external fixators from the theoretical basis to their practical application. Indications and practical use in current Orthopaedic practice are addressed in detail offering the reader essential insights into the strengths and limitations of these devices. The main aspects covered include primary congenital and secondary acquired deformities of the limbs, the etiology, pathomechanics, clinical technical tips and tricks, and suggested frame assemblies are presented. Each chapter addresses a specific Orthopaedic problem and includes representative clinical cases commented on by the authors. Illustrations and X-ray images support the discussion of the various themes treated in the textbook. Special attention is also given to deformity morphology and the consequent geometry of correction as well as economical aspects and the biological risks of radiation exposure. A review of current nomenclature in external fixation is also provided as a quick reference resource. Offering clear and straightforward descriptions of these devices and their current use in practice prepared by leading international experts, this book will benefit expert surgeons and residents alike. **Limb**

Lengthening and Reconstruction Surgery S. Robert Rozbruch, Svetlana Ilizarov, 2006-10-25 An illustrative and in-depth overview of the many available applications and techniques for limb lengthening and reconstruction, this guide provides step-by-step details on the latest surgical procedures for the correction of limb deformities due to congenital defects, growth disturbances, infection, and trauma in both children and adults. Supplyin **Armed Conflict Injuries to the Extremities** Alexander Lerner, Michael Soudry, 2011-04-28 This book is designed to meet the continued need to relearn the principles of treatment of complex war injuries to the extremities in order to minimize post-traumatic and post-treatment complications and optimize functional recovery. Most of the chapters are based on the unique experience gained in the treatment of military personnel who have suffered modern combat trauma and civilian victims of terror attacks at a single large level 1 trauma center. The remaining chapters present the experience of leading international authorities in trauma and reconstructive surgery. A staged treatment protocol is presented ranging from primary damage control through to definitive functional limb reconstruction. The organization of medical aid, anesthesiology, diagnostic imaging, infection prophylaxis, and management of complications are reviewed, and a special chapter is devoted to the challenging dilemma of limb salvage versus amputation in the treatment of limbs at risk. **Campbell's Operative Orthopaedics, E-Book** Frederick M.
