**Advances in Geometric Programming** Mordecai Avriel, 2013-03-09 In 1961 C Zener then Director of Science at Westinghouse Corporation and a member of the U S National Academy of Sciences who has made important contributions to physics and engineering published a short article in the Proceedings of the National Academy of Sciences entitled A Mathematical Aid in Optimizing Engineering Design In this article Zener considered the problem of finding an optimal engineering design that can often be expressed as the problem of minimizing a numerical cost function termed a generalized polynomial consisting of a sum of terms where each term is a product of a positive constant and the design variables raised to arbitrary powers He observed that if the number of terms exceeds the number of variables by one the optimal values of the design variables can be easily found by solving a set of linear equations Furthermore certain invariances of the relative contribution of each term to the total cost can be deduced The mathematical intricacies in Zener's method soon raised the curiosity of R J Duffin the distinguished mathematician from Carnegie Mellon University who joined forces with Zener in laying the rigorous mathematical foundations of optimizing generalized polynomials Interestingly the investigation of optimality conditions and properties of the optimal solutions in such problems were carried out by Duffin and Zener with the aid of inequalities rather than the more common approach of the Kuhn Tucker theory
