Life Cycle Analysis and Assessment in Civil Engineering: Towards an Integrated Vision Robby Caspeele, Luc Taerwe, Dan Frangopol, 2018-10-31 This volume contains the papers presented at IALCCE2018 the Sixth International Symposium on Life Cycle Civil Engineering IALCCE2018 held in Ghent Belgium October 28-31 2018. It consists of a book of extended abstracts and a USB device with full papers including the Fazlur R Khan lecture 8 keynote lectures and 390 technical papers from all over the world. Contributions relate to design inspection assessment maintenance or optimization in the framework of life cycle analysis of civil engineering structures and infrastructure systems. Life cycle aspects that are developed and discussed range from structural safety and durability to sustainability serviceability robustness and resilience. Applications relate to buildings bridges and viaducts highways and runways tunnels and underground structures off shore and marine structures dams and hydraulic structures prefabricated design infrastructure systems etc. During the IALCCE2018 conference a particular focus is put on the cross fertilization between different sub areas of expertise and the development of an overall vision for life cycle analysis in civil engineering. The aim of the editors is to provide a valuable source of cutting edge information for anyone interested in life cycle analysis and assessment in civil engineering including researchers practising engineers consultants contractors decision makers and representatives from local authorities

Study on Data Placement Strategies in Distributed RDF Stores Daniel Dominik Janke, 2020-03-15 The distributed setting of RDF stores in the cloud poses many challenges including how to optimize data placement on the compute nodes to improve query performance. In this book a novel benchmarking methodology is developed for data placement strategies one that overcomes these limitations by using a data placement strategy independent distributed RDF store to analyze the effect of the data placement strategies on query performance. Frequently used data placement strategies have been evaluated and this evaluation challenges the commonly held belief that data placement strategies which emphasize local computation lead to faster query executions. Indeed results indicate that queries with a high workload can be executed faster on hash based data placement strategies than on for example minimal edge cut covers. The analysis of additional measurements indicates that vertical parallelization i.e. a well distributed workload may be more important than

horizontal containment i.e. minimal data transport for efficient query processing Two such data placement strategies are proposed the first found in the literature is entitled overpartitioned minimal edge cut cover and the second is the newly developed molecule hash cover Evaluation revealed a balanced query workload and a high horizontal containment which lead to a high vertical parallelization As a result these strategies demonstrated better query performance than other frequently used data placement strategies The book also tests the hypothesis that collocating small connected triple sets on the same compute node while balancing the amount of triples stored on the different compute nodes leads to a high vertical parallelization

LogiQL Terry Halpin, Spencer Rugaber, 2014-11-13 LogiQL is a new state of the art programming language based on Datalog It can be used to build applications that combine transactional analytical graph probabilistic and mathematical programming LogiQL makes it possible to build hybrid applications that previously required multiple programming languages and databases In this first book to cover LogiQL the authors explain how to design implement and query deductive databases using this new programming language LogiQL's declarative approach enables complex data structures and business rules to be simply specified and then automatically executed It is especially suited to business applications requiring complex rules to be implemented efficiently for example predictive analytics and supply chain optimization Suitable for both novices and experienced developers the book is written in easy to understand language It includes many examples and exercises throughout to illustrate the main concepts and consolidate understanding

Reasoning Web. Learning, Uncertainty, Streaming, and Scalability Claudia d'Amato, Martin Theobald, 2018-09-14 This volume contains lecture notes of the 14th Reasoning Web Summer School RW 2018 held in Esch sur Alzette Luxembourg in September 2018 The research areas of Semantic Web Linked Data and Knowledge Graphs have recently received a lot of attention in academia and industry Since its inception in 2001 the Semantic Web has aimed at enriching the existing Web with meta data and processing methods so as to provide Web based systems with intelligent capabilities such as context awareness and decision support The Semantic Web vision has been driving many community efforts which have invested a lot of resources in developing vocabularies and ontologies for annotating their resources semantically Besides ontologies rules have long been a central part of the Semantic Web framework and are available as one of its fundamental representation tools with logic serving as a unifying foundation Linked Data is a related research area which studies how one can make RDF data available on the Web and interconnect it with other data with the aim of increasing its value for everybody Knowledge Graphs have been shown useful not only for Web search as demonstrated by Google Bing etc but also in many application domains

Linked Data Management Andreas Harth, 2014-01-01 Linked Data Management presents techniques for querying and managing Linked Data that is available on today's Web The book shows how the abundance of Linked Data can serve as fertile ground for research and commercial applications The text focuses on aspects of managing large scale collections of Linked Data It offers a detailed introduction to Linked Data and related standards including the main principles distinguishing Linked Data from standard database technology Chapters also describe how to generate links between datasets and explain the overall architecture of data integration systems based on Linked Data A large part of the text is devoted to query processing in different setups After presenting methods to publish relational data as Linked Data and efficient centralized processing the book explores lookup based distributed and parallel solutions It then addresses advanced topics such as reasoning and discusses work related to read write Linked Data for system interoperation Despite the publication of many papers since Tim Berners Lee developed the Linked Data principles in 2006 the field lacks a comprehensive unified overview of the state of the art Suitable for both researchers and practitioners this book provides a thorough consolidated account of the new data publishing and data integration paradigm While the book covers query processing extensively the Linked Data abstraction furnishes more than a mechanism for collecting integrating and querying data from the open Web the Linked Data technology stack also allows for controlled sophisticated applications deployed in an enterprise environment

Recent Trends in Computational Intelligence Enabled Research Siddhartha Bhattacharyya, Paramartha Dutta, Debabrata Samanta, Anirban Mukherjee, Indrajit Pan, 2021-07-31 The field of computational intelligence has grown tremendously over that past five years thanks to evolving soft computing and artificial intelligent methodologies tools and techniques for envisaging the essence of intelligence embedded in real life observations Consequently scientists have been able to explain and understand real life processes and practices which previously often remain unexplored by virtue of their underlying imprecision uncertainties and redundancies and the unavailability of appropriate methods for describing the incompleteness and vagueness of information represented With the advent of the field of computational intelligence researchers are now able to explore and unearth the intelligence otherwise insurmountable embedded in the systems under consideration Computational Intelligence is now not limited to only specific computational fields it has made inroads in signal processing smart manufacturing predictive control robot navigation smart cities and sensor design to name a few

Recent Trends in Computational Intelligence Enabled Research Theoretical Foundations and Applications explores the use of this computational paradigm across a wide range of applied domains which handle meaningful information Chapters investigate a broad spectrum of the applications of computational intelligence across different platforms and disciplines expanding our knowledge base of various research initiatives in this direction This volume aims to bring together researchers engineers developers and practitioners from academia and industry working in all major areas and interdisciplinary areas of computational intelligence communication systems computer networks and soft computing Provides insights into the theory algorithms implementation and application of computational intelligence techniques Covers a wide range of applications of deep learning across various domains which are researching the applications of computational intelligence Investigates novel techniques and reviews the state of the art in the areas of machine learning computer vision soft computing techniques

Semantic Web Technologies for Intelligent Engineering Applications Stefan Biffl, Marta Sabou, 2016-11-14 This is the first book to explore how Semantic Web technologies SWTs can be used to create intelligent engineering applications IEAs Technology specific chapters reflect the state of the art in relevant SWTs and offer guidelines on how they can be applied in multi disciplinary engineering settings characteristic of engineering production systems In addition a selection of case studies from various engineering domains demonstrate how SWTs can be used to create IEAs that enable for example defect detection or constraint checking Part I Background and Requirements of Industrie 4.0 for Semantic Web Solutions provides the background information needed to

understand the book and addresses questions concerning the semantic challenges and requirements of Industrie 4.0 and which key SWT capabilities may be suitable for implementing engineering applications. In turn, Part II Semantic Web Enabled Data Integration in Multi-Disciplinary Engineering focuses on how SWTs can be used for data integration in heterogeneous multi-disciplinary engineering settings typically encountered in the creation of flexible production systems. Part III Creating Intelligent Applications for Multi-Disciplinary Engineering demonstrates how the integrated engineering data can be used to support the creation of IEAs while Part IV Related and Emerging Trends in the Use of Semantic Web in Engineering presents an overview of the broader spectrum of approaches that make use of SWTs to support engineering settings. A final chapter then rounds out the book with an assessment of the strengths, weaknesses, and compatibilities of SWTs and an outlook on future opportunities for applying SWTs to create IEAs in flexible industrial production systems. This book seeks to build a bridge between two communities: industrial production on one hand and Semantic Web on the other. Accordingly, stakeholders from both communities should find this book useful in their work. Semantic Web researchers will gain a better understanding of the challenges and requirements of the industrial production domain, offering them guidance in the development of new technologies and solutions for this important application area. In turn, engineers and managers from engineering domains will arrive at a firmer grasp of the benefits and limitations of using SWTs, helping them to select and adopt appropriate SWTs more effectively. In addition, researchers and students interested in industrial production-related issues will gain valuable insights into how and to what extent SWTs can help to address those issues.
