Lion Server requirements

Mac OS X Lion Server has processor, memory, disk, and network requirements.

To install Lion Server on a Mac, the Mac must have:

- A 64-bit Intel processor.
- At least 2 gigabytes (GB) of random access memory (RAM).
- At least 10 gigabytes (GB) of disk space available.
Your server needs significantly more disk space—such as a high-capacity external hard drive—if you want to allow Lion, Snow Leopard, and Leopard users to back up their Macs on the server. A server needs even more disk space if you want to back up the server using Time Machine.
- An Internet connection, if you're installing Lion Server from the Mac App Store.
An Internet connection isn't required after installation.

Desktop or server hardware is recommended.

An active connection to a secure network is recommended for server setup, but isn't required. After setup, your server must have a network connection for users to access its services.

Some podcast encoding operations require a compatible graphics card. Some features have additional system requirements or require additional purchases. For details, see the Lion Server website at www.apple.com/macosx/server/.

A Mac server can be set up and used without a display and can be located where you don't have constant physical access to it. You can use another Mac to set up and administer a Mac server remotely. For information, see [Prepare an administrator computer](#).

Lion Server tools

You can administer servers in a small to medium organization with the basic tools included in Lion Server. If you need to configure Lion Server in a large organization, or if you have special configuration requirements, you can use advanced administration tools that you may need to install separately. You can also use command-line tools to perform server administration tasks.

Basic tools

You can manage users and groups, start and stop services, change service settings, and perform other essential server administration tasks using the applications and utilities included with Lion Server and described below.

Screen Sharing	Observe and control your server from another computer on the network. You can open Screen Sharing from the Tools menu in the Server app.
Server	Manage users and groups. Monitor server status. Start, stop, and customize services. View and change system, network, and storage settings. Manage an AirPort device.
Server Status widget for Dashboard	Monitor server activity from any Mac with Mac OS X Lion.
System Preferences	Configure Time Machine backup of the server. Set up sharing for a directly connected USB or FireWire printer.

For more information about Screen Sharing, Server, and System Preferences, open the application and use the Help menu. For more information about the Server Status widget, see [Use the Server Status widget](#).
