Chapter 12 – Linear Programming

Exercise 12.1

1. Maximize $Z = 3x + 4y$

Subject to the constraints: $x + y \leq 4$, $x \geq 0$, $y \geq 0$

Ans:

The given constraints are, $x + y \leq 4$, $x \geq 0$, $y \geq 0$, and the feasible region which is in accordance with the given constraints is

The points at the corners in the feasible region are O (0, 0), A (4, 0), and B (0, 4). Z assumes the following values on these points.

Shetty, 2014-08-22 As the Solutions Manual this book is meant to accompany the main title Nonlinear Programming Theory and Algorithms Third Edition This book presents recent developments of key topics in nonlinear programming NLP using a logical and self contained format The volume is divided into three sections convex analysis optimality conditions and dual computational techniques Precise statements of algorithms are given along with convergence analysis Each chapter contains detailed numerical examples graphical illustrations and numerous exercises to aid readers in understanding the concepts and methods discussed Solutions Manual for Linear Programming Vasek Chvatal, 1984-06-01

Introduction to Stochastic Programming John R. Birge, François Louveaux, 2006-04-06 This rapidly developing field encompasses many disciplines including operations research mathematics and probability Conversely it is being applied in a wide variety of subjects ranging from agriculture to financial planning and from industrial engineering to computer networks This textbook provides a first course in stochastic programming suitable for students with a basic knowledge of linear programming elementary analysis and probability The authors present a broad overview of the main themes and methods of the subject thus helping students develop an intuition for how to model uncertainty into mathematical problems what uncertainty changes bring to the decision process and what techniques help to manage uncertainty in solving the problems The early chapters introduce some worked examples of stochastic programming demonstrate how a stochastic model is formally built develop the properties of stochastic programs and the basic solution techniques used to solve them The book then goes on to cover approximation and sampling techniques and is rounded off by an in depth case study A well paced and wide ranging introduction to this subject Modeling, Analysis and Optimization of Process and Energy Systems F. Carl Knopf, 2011-12-14 Energy costs impact the profitability of virtually all industrial processes Stressing how plants use power and how that power is actually generated this book provides a clear and simple way to understand the energy usage in various processes as well as methods for optimizing these processes using practical hands on simulations and a unique approach that details solved problems utilizing actual plant data Invaluable information offers a complete energy saving approach essential for both the chemical and mechanical engineering curricula as well as for practicing engineers

In the past decades several researchers have developed statistical models for the prediction of corporate bankruptcy e g Altman 1968 and Bilderbeek 1983 A model for predicting corporate bankruptcy aims to describe the relation between bankruptcy and a number of explanatory financial ratios These ratios can be calculated from the information contained in a company s annual report The is to obtain a method for timely prediction of bankruptcy a so ultimate purpose called early warning system More recently this subject has attracted the attention of researchers in the area of machine learning e g Shaw and Gentry 1990 Fletcher and Goss 1993 and Tam and Kiang 1992 This research is usually directed at the comparison of machine learning methods such as induction of classification trees and neural networks with the standard statistical methods of linear discriminant analysis and logistic regression In earlier research Feelders et al 1994 performed a similar comparative analysis The methods used were linear discriminant analysis decision trees and neural networks We used a data

set which contained 139 annual reports of Dutch industrial and trading companies The experiments showed that the estimated prediction error of both the decision tree and neural network were below the estimated error of the linear discriminant Thus it seems that we can gain by replacing the traditionally used linear discriminant by a more flexible classification method to predict corporate bankruptcy The data set used in these experiments was very small however
