 supply caused by the augmenting global population groundwater production has acquired a new importance In many areas
 surface waters are not available in sufficient quantity or quality Thus an increasing demand for groundwater has resulted
 However the residence of time of groundwater can be of the order of thousands of years while surface waters is of the order
 of days Therefore substantially more attention is warranted for transport processes and pollution remediation in groundwater
 than for surface waters Similarly pollution remediation problems in groundwater are generally complex This excellent timely
 resource covers the field of groundwater from an engineering perspective comprehensively addressing the range of subjects
 related to subsurface hydrology It provides a practical treatment of the flow of groundwater the transport of substances the
