### **Handbook of Clinical Behavior Therapy with the Elderly Client**

Patricia A. Wisocki, 2013-11-21 Although we speak of the elderly as if there were one body of people with common characteristics older adults are more heterogeneous than any other population. People over the age of 65 are also the fastest growing segment of the population in the United States currently numbering 25 million. The majority of older adults reside in their communities; a small fraction of them are cared for in institutions. Most may expect to experience some kind of physical impairment. Approximately a quarter of the population may expect to suffer a mental health impairment. While traditional therapies have not been especially effective for older adults, behavior therapy has shown exceptional promise as a treatment modality. This book presents a comprehensive explication of the relatively new field of behavioral gerontology. It was written for the clinician interested in the interaction of medical, environmental, and psychological variables and their effects on treatment of elderly clients and for the researcher who will be looking to extend knowledge about interventions with this population. It will be useful for the graduate student in clinical psychology as well as the experienced clinician who will want to include the elderly in his or her therapeutic population.

### **Handbook of Innovation Indicators and Measurement**

Fred Gault, 2013-01-01 A great book to understand and foster innovation at all levels, a truly innovative piece of work. Enrico Giovannini, Minister of Labour and Social Policies, Italy. This book brings together original contributions from world-leading experts on innovation indicators and is unique in several respects. First, the focus is upon innovation in terms of commercialized products and processes and not on secondary indicators of research or patenting. Second, it combines academic perspectives with user perspectives from industry and international organizations. Third, it strikes a good balance between old and new indicators, opening up new dimensions of innovation for measuring. It is a book worth reading for scholars studying innovation for policy makers and not least for innovation managers in the private sector. Bengt-ke Lundvall, Aalborg University, Denmark, and Sciences Po Paris, France. This Handbook comprehensively examines indicators and statistical measurement related to innovation as defined in the OECD Eurostat Oslo Manual. It deals with the development and the use of innovation indicators to support decision making and is written by authors who are practitioners who know what works and what does not in order to improve the development of indicators to satisfy future policy needs. This unique volume presents the historical and geographical context for innovation indicators and measurement, practical examples of how measurement is actually undertaken, new areas of innovation indicators and measurement including consumer innovation, public sector innovation, and social innovation. This informative Handbook will appeal to policy makers in government departments, statistical offices, and research institutes and international organizations such as the EU, OECD, and the UN, as well as university departments of economics, sociology, law, science, and technology, and public policy.
