Low-angle Radar Land Clutter J. Barrie Billingsley, 2002 In this unique book Billingsley solves the problem of radar land clutter by showing the reader how to design and predict the performance of radars that operate in situations where echoes from the earth's surface interfere with radar target echoes , *Basic Radar Analysis, Second Edition* Mervin C. Budge, Shawn R. German , 2020-04-30 This highly anticipated second edition of an Artech House classic covers several key radar analysis areas the radar range equation detection theory ambiguity functions waveforms antennas active arrays receivers and signal processors CFAR and chaff analysis Readers will be able to predict the detection performance of a radar system using the radar range equation its various parameters matched filter theory and Swerling target models The performance of various signal processors single pulse pulsed Doppler LFM NLFM and BPSK are discussed taking into account factors including MTI processing integration gain weighting loss and straddling loss The details of radar analysis are covered from a mathematical perspective with in depth breakdowns of radar performance in the presence of clutter Readers will be able to determine the noise temperature of a multi channel receiver as it is used in active arrays With the addition of three new chapters on moving target detectors inverse synthetic aperture radar ISAR and constant false alarm rate CFAR and new MATLAB codes this expanded second edition will appeal to the novice as well as the experienced practitioner

Hannen, 2004-06-30 This updated edition provides a solid understanding of radar fundamentals and applications with far less of the mathematical rigor and technical data presented in engineering books for specialists *Academic Press Library in Signal Processing* Fulvio Gini, Nikolaos D. Sidiropoulos, 2013-09-10 This second volume edited and authored by world leading experts gives a review of the principles methods and techniques of important and emerging research topics and technologies in communications and radar engineering With this reference source you will Quickly grasp a new area of research Understand the underlying principles of a topic and its application Ascertain how a topic relates to other areas and learn of the research issues yet to be resolved Quick tutorial reviews of important and emerging topics of research in array and statistical signal processing Presents core principles and shows their application Reference content on core principles technologies algorithms and applications Comprehensive references to journal articles and other literature on which to build further more specific and detailed knowledge Edited by leading people in the field who through their reputation have been able to commission experts to write on a particular topic **Selected papers from the 2019 IEEE International Workshop on Metrology for AeroSpace** Pasquale Daponte, Eulalia Balestrieri, 2021-04-21 This book is devoted to recent developments of instrumentation and measurement techniques applied to the aerospace field It includes 23 selected papers from the 2019 IEEE International Workshop on Metrology for AeroSpace Measurements are essential for obtaining a deeper knowledge of a phenomenon or an asset as well as for making proper decisions and proposing new and efficient solutions and this is especially true in

environments as complex as aerospace The research contributions included in the book can raise the interest of a wide group of researchers operators and decision makers from metrology and aerospace fields by presenting the most innovative solutions in this field from the scientific and technological points of view

Perspectives on Defense Systems Analysis

William P. Delaney, 2015-05-01 A guide to defense systems analysis by experts who have worked on systems that range from air defense to space defense The Department of Defense and the military continually grapple with complex scientific engineering and technological problems Defense systems analysis offers a way to reach a clearer understanding of how to approach and think about complex problems It guides analysts in defining the question capturing previous work in the area assessing the principal issues and understanding how they are linked The goal of defense systems analysis is not necessarily to find a particular solution but to provide a roadmap to a solution or an understanding of the relative value of alternative solutions In this book experts in the field all of them with more than twenty years of experience offer insights advice and concrete examples to guide practitioners in the art of defense systems analysis The book describes general issues in systems analysis and analysis protocols in specific defense areas It offers a useful overview of the process a discussion of different venues and practical advice running a study and reporting its results It discusses red teaming the search for vulnerabilities that might be exploited by an adversary and its complement blue teaming the search for solutions to known shortcomings It describes real world defense systems analysis for both traditional and nontraditional areas including air defense and ballistic missile defense systems bioterrorism defense space warfare and interplanetary communications Perspectives on Defense Systems Analysis is a very readable resource for analysts and engineers in industry government and research

Introduction to Adaptive Arrays Robert A. Monzingo, Thomas W. Miller, 2004 Introduction to Adaptive Arrays serves as an introduction to the subject of adaptive sensor systems whose principle purpose is to enhance the detection and reception of certain desired signals The field of array sensor systems is now a maturing technology With applications of these systems growing more and more numerous there is a wealth of widely scattered literature on various aspects of such systems Unfortunately few books attempt to provide an integrated treatment of the entire system that gives the reader the perspective to organize the available literature into easily understood parts Intended for use both as a graduate level textbook and as a reference work for engineers scientists and systems analysts this book provides such an integrated treatment by emphasizing the principles and techniques that are of fundamental importance in modern adaptive array systems

Microwave Passive Direction Finding Stephen E. Lipsky, 2004 Microwave Passive Direction Finding unifies direction finding DF theory and brings together into a single source wide ranging information on the technology of measuring the direction of arrival of microwave signals Throughout the material there is authoritative information useful to preparing a detailed technical proposal for new business that has been compiled from many years of defense industry presentations reports and systems development Diagrams and photographs of state of the art equipment depict the methods

discussed and equations and charts facilitate a hands on approach to calculating system performance The book also presents rarely published systems concepts such as digital preprocessing supercommutation and wide RF bandwidth signal detection methods Specific sections cover evolution and use of monopulse passive DF receiver theory design of antenna elements for conformal DF coverage receiver configurations DF antenna arrays interferometer DF techniques computation methods for signal detection probability of detection accuracy of DF systems and signal processing and display methods More than any book on this technology Microwave Passive Direction Finding anticipates the questions that arise in the DF design process The chapters are organized to stand alone making the book useful as a text reference for the practicing engineer At the same time the material is organized inductively so that it can be used for a college or seminar text
