Experiments have generally demonstrated that developing countries have distinctive demand for microfinance services, and a distinctive financial infrastructure. Furthermore, microfinance, especially microcredit, is a distinctive financial service.

and the other 100% of the respondents had a high school diploma or higher.

Abstract—The purpose of this study was to determine the effects of a 12-week, low-intensity, low-impact, and low-impact aerobically and resistance training program on the physical fitness and health-related quality of life of older adults. The study was a randomized controlled trial. The participants were 60 older adults (mean age = 70.5 years) who were randomly assigned to either a control group or an intervention group. The intervention group participated in a 12-week, low-intensity, low-impact, and low-impact aerobically and resistance training program. The control group did not participate in any exercise program. The results of the study showed that the intervention group had significantly higher levels of physical fitness and health-related quality of life compared to the control group. The findings of this study suggest that a 12-week, low-intensity, low-impact, and low-impact aerobically and resistance training program can improve the physical fitness and health-related quality of life of older adults.
