Grey Information Theory And Practical Applications Advanced Information And Knowledge Processing:

Grey Information Sifeng Liu, Yi Lin, 2006-03-08 Rapid formation and development of new theories of systems science have become an important part of modern science and technology. For a long time since the 1940s there have appeared systems theory, information theory, fuzzy mathematics, cybernetics, dissipative structures, synergetics, catastrophe theory, chaos theory, bifurcations, ultra-circulations, dynamics, and many other systems theories. Grey systems theory is also one of such systems theories that appeared initially in the 1980s. When the research of systems science and the method and technology of systems engineering are applied in various traditional disciplines such as management science, decision science, and various scientific disciplines, a whole new group of new results and breakthroughs are obtained. Such a historical background has provided the environment and soil for grey systems theory to form and to develop rapidly in the past 20 plus years. More especially in 1982 Professor Deng Ju Long published the first research paper in the area of grey systems in the international journal entitled *Systems and Control Letters* published by North Holland Co. His paper was titled *Control Problems of Grey Systems*. The publication of this paper signalled the birth of grey systems theory after many years of effective research of the founding father. This new theory soon caught the attention of the international academic community and practitioners of science. Many well-known scholars such as Chinese academicians Qian Xueshen, Song Jian, and Zhang Zhongjun, Professor Roger W.

Grey Systems Theory in Business Management Moses Olabhele Esangbedo, Jianwu Xue, 2025-01-23 This book is dedicated to addressing the central challenge of making informed business decisions within an environment characterized by uncertainty, employing Multiple Criteria Decision Making (MCDM) methodologies. Chapter 1 provides an overview of the related concepts of grey systems theory. Chapter 2 proposes evaluation criteria for five major themes including human resource, information systems, and contractor selection problems. Chapters 3-6 present four improved grey hybrid weighting methods: the grey rank order centroid method, the grey regulatory focus theory method, the grey step-wise weight analysis ratio evaluation, and the grey point allocation weighting method. Chapters 7-10 introduce four improved hybrid grey evaluation methods: the grey weighted sum model, grey relational analysis, the grey regime method, and the grey integer linear programming method. Chapters 11 and 12 discuss additional grey decision making methods and conclusions are drawn along with future prospects.

Energy Optimization in Process Systems Stanislaw Sieniutycz, Jacek Jezowski, 2009-05-06 Despite the vast research on energy optimization and process integration, there has to date been no synthesis linking these together. This book fills the gap, presenting optimization and integration in energy and process engineering. The content is based on the current literature and includes novel approaches developed by the authors. Various thermal and chemical systems, heat and mass exchangers, thermal and water networks, energy converters, recovery units, solar collectors, and separators are considered. Thermodynamics, kinetics, and economics are used to formulate and solve problems with constraints on process rates, equipment size, environmental parameters, and costs. Comprehensive coverage of dynamic

optimization of energy conversion systems and separation units is provided along with suitable computational algorithms for deterministic and stochastic optimization approaches based on nonlinear programming dynamic programming variational calculus Hamilton Jacobi Bellman theory Pontryagin's maximum principles and special methods of process integration Integration of heat energy and process water within a total site is shown to be a significant factor reducing production costs in particular costs of utilities for the chemical industry This integration involves systematic design and optimization of heat exchangers and water networks HEN and WN After presenting basic insight based Pinch Technology systematic optimization based sequential and simultaneous approaches to design HEN and WN are described Special consideration is given to the HEN design problem targeting stage in view of its importance at various levels of system design Selected advanced methods for HEN synthesis and retrofit are presented For WN design a novel approach based on stochastic optimization is described that accounts for both grassroot and revamp design scenarios Presents a unique synthesis of energy optimization and process integration that applies scientific information from thermodynamics kinetics and systems theory Discusses engineering applications including power generation resource upgrading radiation conversion and chemical transformation in static and dynamic systems Clarifies how to identify thermal and chemical constraints and incorporate them into optimization models and solutions
