Low-Enthalpy Geothermal Resources for Power Generation D. Chandrasekharam, Jochen Bundschuh, 2008-07-01 In many developing countries the exponentially growing electricity demand can be covered by using locally available sustainable low enthalpy geothermal resources 80 150 C Such low enthalpy sources can make electricity generation more independent from oil imports or from the over dependence on hydropower Until now this huge energy resource has only been used by some developed countries like the USA Iceland and New Zealand The reason why low enthalpy geothermal resources are not used for electricity generation is that there is still a misconception that low enthalpy thermal fluids are fit only for direct application The advancement of drilling technology development of efficient heat exchangers and deployment of high sensitive binary fluids contribute to the useful application of this energy resource on a much wider scale This book focuses on all aspects of low enthalpy geothermal thermal fluids It will be an important source book for all scientists working on geothermal energy development Specifically those involved in research in developing countries rich in such thermal resources and for agencies involved in bilateral and international cooperation

Political and Economical issues nowadays are forcing many countries to reconsider their way of energy production and consumption. Thus the Russian Federation recently in 2011 has completed major reconfiguration of the sector. This book is giving a comprehensive overview of the sector after the decade of restructuring. It determines political and economical development of the sector, identifies technical capabilities, current and future energy matrix. Taking into account that the country has high amount of conventional resources, the author reviews energy efficiency potential and programs capacities for penetration of innovative smart technologies and for expansion of environmentally friendly solutions for energy production and consumption. She also analyzes and concludes the range of technical and economical potential for renewable energy boost at the main land as well as at remote areas. As presented in the book, the result of the research gives a broad notion of possible directions of the Russian electricity sector development for the next 20 years.

Alternative Energy Resources in the MENA Region Abdellah Henni, Abdelazim Negm, Djamal Zerrouki, 2024-06-14. This book outlines the development of renewable energies in the Middle East and North Africa; it offers up-to-date information about their variability, availability and utilization and serves as a guide for understanding the MENA renewable energy potential. Readers will find an authoritative discussion about the implementation of renewable energies, trends and forecast of solar, wind and geothermal systems applications in this region. Case studies from China, Mexico and Vietnam are also included in this book to foster the implementation of renewable energies in the MENA region. The MENA region is known for its immense oil, petroleum and gas reserve, being one of the most important regions in the world for fossil energy accessibility and hence for the global economic stability. This region holds at the same time the world's greatest potential for renewable energy and over the past few years it has been receiving national and international political support for promoting the future of solar and wind power energies. However, can the region go green taking into account the availability of the natural resources? Expert contributors from countries such as United Arab Emirates, Egypt, Algeria, Turkey and Morocco provide their perspective on this challenge and offer a comprehensive overview of the latest pilot projects for renewable energy in the region. This book will appeal to researchers, students, engineers and policymakers interested in the potential of alternative energy resources in the MENA region.

Energy Resources and Systems Tushar K. Ghosh, Mark A.

Prelas, 2011-06-27 This second volume of Energy Resources and Systems is focused on renewable energy resources. Renewable energy mainly comes from wind solar hydropower geothermal ocean bioenergy ethanol and hydrogen. Each of these energy resources is important and growing. For example, high head hydroelectric energy is a well established energy resource and already contributes about 20% of the world's electricity. Some countries have significant high head resources and produce the bulk of their electrical power by this method. However, the bulk of the world's high head hydroelectric resources have not been exploited, particularly by the underdeveloped countries. Low head hydroelectric is unexploited and has the potential to be a growth area. Wind energy is the fastest growing of the renewable energy resources for the electricity generation. Solar energy is a popular renewable energy resource. Geothermal energy is viable near volcanic areas. Bioenergy and ethanol have grown in recent years primarily due to changes in public policy meant to encourage its usage. Energy policies stimulated the growth of ethanol, for example, with the unintended side effect of rise in food prices. Hydrogen has been pushed as a transportation fuel. The authors want to provide a comprehensive series of texts on the interlinking of the nature of energy resources, the systems that utilize them, the environmental effects, the socioeconomic impact, the political aspects and governing policies. Volume 1 on Fundamentals and Non Renewable Resources was published in 2009. It blends fundamental concepts with an understanding of the non renewable resources that dominate today's society. The authors are now working on Volume 3 on nuclear advanced energy resources and nuclear batteries, which consists of fusion space power systems, nuclear energy conversion, nuclear batteries and advanced power fuel cells and energy storage. Volume 4 will cover environmental effects, remediation and policy. Solutions to providing long term stable and economical energy is a complex problem which links social, economical, technical and environmental issues. It is the goal of the four volume Energy Resources and Systems series to tell the whole story and provide the background required by students of energy to understand the complex nature of the problem and the importance of linking social, economical, technical and environmental issues.

Planet Earth 2011 Elias Carayannis, 2011-10-03 The failure of the UN climate change summit in Copenhagen in

December 2009 to effectively reach a global agreement on emission reduction targets led many within the developing world to view this as a reversal of the Kyoto Protocol and an attempt by the developed nations to shirk out of their responsibility for climate change. The issue of global warming has been at the top of the political agenda for a number of years and has become even more pressing with the rapid industrialization taking place in China and India. This book looks at the effects of climate change throughout different regions of the world and discusses to what extent cleantech and environmental initiatives such as the destruction of fluorinated greenhouse gases, biofuels and the role of plant breeding and biotechnology. The book concludes with an insight into the socio religious impact that global warming has, citing Christianity and Islam.
