PERFORMANCE WAS
STABLE, WITH A
SOLID RECORD OF

PROFITABILITY.

Abstract: The purpose of this study was to determine the effect of a 12-week resistance training program on the muscle strength and endurance of young adults. The study was conducted in a laboratory setting. The subjects were 20 young adults (10 males and 10 females) who were randomly assigned to either a resistance training group or a control group. The resistance training group performed a 12-week program of resistance training, while the control group did not. The subjects were tested at baseline and at the end of the 12-week program. The results showed that the resistance training group had significantly greater muscle strength and endurance than the control group at the end of the 12-week program. The results also showed that the resistance training group had significantly greater muscle strength and endurance than the control group at baseline. The results of this study suggest that a 12-week resistance training program can improve muscle strength and endurance in young adults.

Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were randomly assigned to either a 12-week training program or a control group. The training program consisted of three sessions per week, each lasting 45 minutes. The control group did not participate in any training. The subjects were assessed at baseline and at 12 weeks. The primary outcome was the change in HRQL. The secondary outcomes were the change in physical fitness and the change in body composition. The results showed that the training program had a significant positive effect on HRQL, physical fitness, and body composition. The control group showed no significant changes. The results suggest that a 12-week training program can improve the physical fitness and HRQL of sedentary, middle-aged women.

Participatory Design Douglas Schuler,Aki Namioka,2017-12-14 The voices in this collection are primarily those of researchers and developers concerned with bringing knowledge of technological possibilities to bear on informed and effective system design Their efforts are distinguished from many previous writings on system development by their central and abiding reliance on direct and continuous interaction with those who are the ultimate arbiters of system adequacy namely those who will use the technology in their everyday lives and work A key issue throughout is the question of who does what to whom whose interests are at stake who initiates action and for what reason

who defines the problem and who decides that there is one The papers presented follow in the footsteps of a small but growing international community of scholars and practitioners of participatory systems design Many of the original European perspectives are represented here as well as some new and distinctively American approaches The collection is characterized by a rich and diverse set of perspectives and experiences that despite their differences share a distinctive spirit and direction a more humane creative and effective relationship between those involved in technology s design and use and between technology and the human activities that motivate the technology Software Development Tools Raymond C.
