E. Moore, J. H. Waite, Jr., 1988 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 44 Existing

models of the plasma distribution and dynamics in magnetosphere ionosphere systems form a patchwork quilt of different techniques and boundaries chosen to define tractable problems With increasing sophistication in both observational and modeling techniques has come the desire to overcome these limitations and strive for a more unified description of these systems On the observational side we have recently acquired routine access to diagnostic information on the lowest energy bulk plasma completing our view of the plasma and making possible comparisons with magnetohydrodynamic calculations of plasma moments On the theoretical side rising computational capabilities and shrewdly designed computational techniques have permitted the first attacks on the global structure of the magnetosphere Similar advances in the modeling of neutral atmospheric circulation suggest an emergent capability to globally treat the coupling between plasma and neutral gases Simultaneously computer simulation has proven to be a very useful tool for understanding magnetospheric behaviors on smaller space and time scales

Geophysik III / Geophysics III G. Schmidtke,K. Suchy,K. Rawer,2013-12-11 This

Encyclopedia aims basically at summarizing the wealth of well established facts and outlining the relevant theories in the different branches of physics With this as goal the writers were asked to present their specific field in such a way that access is possible to any scientist without special a priori information in that field the basic concepts of physics are assumed to be known to the reader The survey given in each paper was also to be long lasting so that even a few years after publication each volume would be useful for example as an introduction for newcomers or as a source of information for workers in a neighbouring field In the field of geophysics dealt with in Vols 47 49 of the Encyclopedia this task is difficult to achieve

because during the last decades there has been a much faster development of basic information and theory than during the decades before When I came to contribute to this work the famous Julius Bartels then editor of the geophysical part told me that Vol 49 should certainly take into account the results of the International Geophysical Year 1957 58 I G Y and that we had better wait until these were accessible than produce a kind of information which might be obsolete in a short time
