Depression in Parents, Parenting, and Children Institute of Medicine, National Research Council, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Depression, Parenting Practices, and the Healthy Development of Children, 2009-10-28 Depression is a widespread condition affecting approximately 7.5 million parents in the U.S. each year and may be putting at least 15 million children at risk for adverse health outcomes Based on evidentiary studies major depression in either parent can interfere with parenting quality and increase the risk of children developing mental behavioral and social problems Depression in Parents Parenting and Children highlights disparities in the prevalence identification treatment and prevention of parental depression among different sociodemographic populations It also outlines strategies for effective intervention and identifies the need for a more interdisciplinary approach that takes biological psychological behavioral interpersonal and social contexts into consideration A major challenge to the effective management of parental depression is developing a treatment and prevention strategy that can be introduced within a two generation framework conducive for parents and their children Thus far both the federal and

state response to the problem has been fragmented poorly funded and lacking proper oversight This study examines options for widespread implementation of best practices as well as strategies that can be effective in diverse service settings for diverse populations of children and their families The delivery of adequate screening and successful detection and treatment of a depressive illness and prevention of its effects on parenting and the health of children is a formidable challenge to modern health care systems This study offers seven solid recommendations designed to increase awareness about and remove barriers to care for both the depressed adult and prevention of effects in the child The report will be of particular interest to federal health officers mental and behavioral health providers in diverse parts of health care delivery systems health policy staff state legislators and the general public *Toward the Healthy City* Jason Corburn,2009 A call to reconnect the fields of urban planning and public health that offers a new decision making framework for healthy city planning **Urban Health** Sandro Galea,Catherine K. Ettman,David Vlahov,2019-04-04 An essential collection that advances our understanding of how cities influence our health More than half the world s population lives in cities a figure that will grow to two thirds by 2030 As global populations rapidly consolidate around urban centers the scientific understanding of what this means for human health faces a new and greater urgency Urban Health connects urban exposures the experiences choices and behaviors shaped by living in a city to their impact on population health By using the ubiquitous aspects of the urban experience as a lens to study these exposures across borders and demographics it offers a new scalable framework for understanding health and disease Its applications to public health epidemiology and social science are virtually unlimited Enriched with case studies that consider the state of health in cities all over the world this book does more than capture the state of a nascent field it holds a critical mirror to itself considering the next decade and arming a new generation with the tools for research and practice Happy City: Transforming Our Lives Through Urban Design Charles Montgomery,2013-11-12 A journalist travels the world and investigates current socioeconomic theories of happiness to discover why most modern cities are designed to make us miserable what we can do to change this and why we have more to learn from poor cities than from prosperous ones Geospatial Technologies for Urban Health Yongmei Lu,Eric Delmelle,2019-10-10 This volume presents a timely collection of research papers on the progress opportunities and challenges related to the advancement of geospatial technologies for applications in urban health research and management The chapter authors cover technologies ranging from traditional GIS and remote sensing technologies to recently developed tracking locational technologies and volunteered geographic information VGI In four main sections the book uniquely contributes to the conversation of how geospatial technologies and other GIScience research may be enhanced by addressing the data and challenges presented by urban health issues The book is intended for those with backgrounds in health and medical geography social epidemiology urban planning health management and lifestyle research The book starts with an introduction by the editors providing an overview of traditional and emerging geospatial technologies and how they each can

Sexualities and Identities of Minority Women Sana Loue, 2009-08-11 The concept for this book came about following the publication of the volume *Health Issues Confronting Minority Men Who Have Sex with Men* published by Springer in 2008 Consistent with its title that work focused on specific health issues identified by communities researchers and AIDS service providers that were and continue to be of concern During the preparation of that volume I received numerous telephone calls and e mails from women in various parts of the country asking why a book was not also being developed to address their often neglected concerns Accordingly the topics addressed in *Identities and Sexualities of Minority Women* were developed based on input from minority women who participated in focus groups conducted in diverse regions of the United States These focus groups were held specifically to provide an opportunity for sexual minority women in minority communities to identify those issues that from their perspective are most salient and relevant to their lives It is not surprising in view of the variation in process by which the topics were identified as well as the differences in perspective associated with differences in sex and gender that this resulting compilation of topics departs substantially from the focus of the companion text addressing health issues of minority men who have sex with men

Encyclopedia of Epidemiology Sarah Boslaugh, 2008 Presents information from the field of epidemiology in a less technical more accessible format Covers major topics in epidemiology from risk ratios to case control studies to mediating and moderating variables and more Relevant topics from related fields such as biostatistics and health economics are also included

Encyclopedia of Environmental Health, 2008-09-01 Environmental health has evolved over time into a complex multidisciplinary field Many of the key determinants and solutions to environmental health problems lie outside the direct realm of health and are strongly dependent on environmental changes water and sanitation industrial development education employment trade tourism agriculture urbanization energy housing and national security Environmental risks vulnerability and variability manifest themselves in different ways and at different time scales While there are shared global and transnational problems each community country or region faces its own unique environmental health problems the solution of which depends on circumstances surrounding the resources customs institutions values and environmental vulnerability This work contains critical reviews and assessments of environmental health practices and research that have worked in places and thus can guide programs and economic development in other countries or regions

The Encyclopedia of Environmental Health Five Volume Set seeks to conceptualize the subject more clearly to describe the best available scientific methods that can be used in characterizing and managing environmental health risks to extend the field of environmental health through new theoretical perspectives and heightened appreciation of social economic and political contexts and to encourage a richer analysis in the field through examples of diverse experiences in dealing with the health environment interface The Encyclopedia of Environmental Health contains numerous examples of policy options and environmental health practices that have worked and thus can guide programs in other countries or regions It includes a wide range of tools and strategies that can assist communities and countries in assessing environmental health conditions monitoring progress of intervention implementation and evaluating outcomes Provides a comprehensive overview of existing knowledge in this emerging field Articles contain summaries and assessments of environmental health practices and research providing a framework for further research Places environmental health in the broader context of environmental change and related ecological political economic social and cultural issues

Women and Addiction Kathleen T. Brady, Sudie E. Back, Shelly F. Greenfield, 2009-04-02 For many years addiction research focused almost exclusively on men Yet scientific awareness of sex and gender differences in substance use disorders has grown tremendously in recent decades This volume brings together leading authorities to review the state of the science and identify key directions for research and clinical practice Concise focused chapters illuminate how biological and psychosocial factors influence the etiology and epidemiology of substance use disorders in women their clinical presentation course and psychiatric comorbidities treatment access and treatment effectiveness Prevalent substances of abuse are examined as are issues facing special populations
