Ternary distillation is the basis for a conceptual process design for separating azeotropic mixtures by using an entrainer and for reactive distillation which is a rapidly developing field of distillation. Another special feature of the book is the design of distillation equipment i.e. tray columns and packed columns. In practice empirical know how is preferably used in many companies often in form of empirical equations which are not even dimensionally correct. The objective of the proposed book is the derivation of the relevant equations for column design based on first principles. The field of column design is permanently developing with respect to the type of equipment used and the know how of two phase flow and interfacial mass transfer.

Principles of Chemical Separations with Environmental Applications Richard D. Noble, Patricia A.

Terry, 2004-03-25 Chemical separations are of central importance in many areas of environmental science whether it is the clean up of polluted water or soil, the treatment of discharge streams from chemical processes or modification of a specific process to decrease its environmental impact. This book is an introduction to chemical separations focusing on their use in environmental applications. The authors first discuss the general aspects of separation technology as a unit operation. They also describe how property differences are used to generate separations, the use of separating agents and the selection criteria for particular separation techniques. The general approach for each technology is to present the chemical and/or physical basis for the process and explain how to evaluate it for design and analysis. The book contains many worked examples and homework problems. It is an ideal textbook for undergraduate and graduate students taking courses on environmental separations or environmental engineering.

Filtration Richard J. Wakeman, E. S. Tarleton, 1999 This text aims to inform engineers about the available equipment options for solid liquid separation, put these into classifications and to present applicable models so that meaningful design and simulation calculations can be carried out.
