Emmerson, 2018-05-16 The theme of this Research Companion is connectivity and the global reach of electroacoustic music and sonic arts made with technology The possible scope of such a companion in the field of electronic music has changed radically over the last 30 years The definitions of the field itself are now broader there is no clear boundary between electronic music and sound art Also what was previously an apparently simple divide between art and popular practices is now not easy or helpful to make and there is a rich cluster of streams of practice with many histories including world music traditions This leads in turn to a steady undermining of a primarily Euro American enterprise in the second half of the twentieth century Telecommunications technology most importantly the development of the internet in the final years of the century has made materials practices and experiences ubiquitous and apparently universally available though some

contributions to this volume reassert the influence and importance of local cultural practice Research in this field is now increasingly multi disciplinary Technological developments are embedded in practices which may be musical social individual and collective The contributors to this companion embrace technological scientific aesthetic historical and social approaches and a host of hybrids but most importantly they try to show how these join up Thus the intention has been to allow a wide variety of new practices to have voice unified through ideas of reaching out and connecting together and in effect showing that there is emerging a different kind of global music Experimental Music Since 1970 Jennie Gottschalk,2016-08-11

What is experimental music today Recent attempts to define or identify examples of experimental music have been cautious and subjective offering very little guidance to anyone with an interest in this field of activity Is experimental music a historical event that refers only to John Cage and his influence or does it have a greater spread and longevity The development of this musical practice over the last 45 years merits a fresh definition and discussion An experimental approach is not identifiable in specific sounds or techniques and its scope would be drastically limited if it were judged on the basis of social or aesthetic groupings or self identifications of composers Artistic Research Paulo de Assis,Lucia D'Errico,2019-11-13

Artistic Research Charting a Field in Expansion provides a multidisciplinary overview of different discourses and practices exploring cutting edge questions from the burgeoning field of artistic research Intended as a primer on artistic research it presents diverse perspectives strategies methodologies and concrete examples of research projects situated at the crossroads of art and academia exposing international work of significant projects from Europe Asia Australia South and North America The book includes chapters on diverse fields of thought and practice addressing a common thread of questions and problematics The comprehensive editors introduction offers a much needed extensive overview of practice based artistic research in general This book is ideal for graduate students across philosophy cultural studies art music performance studies and more **Modular Synthesis** Ezra J. Teboul,Andreas Kitzmann,Einar Engström,2024-04-24

Modular Synthesis Patching Machines and People brings together scholars artists composers and musical instrument designers in an exploration of modular synthesis an unusually multifaceted musical instrument that opens up many avenues for exploration and insight particularly with respect to technological use practice and resistance Through historical technical social aesthetic and other perspectives this volume offers a collective reflection on the powerful connections between technology creativity culture and personal agency Ultimately this collection is about creativity in a technoscientific world and speaks to issues fundamental to our everyday lives and experiences by providing insights into the complex relationships between content creators the technologies they use and the individuals and communities who design and engage with them With chapters covering VCV Rack modular synthesis instrument design and the histories of synthesizer technology as well as interviews with Dave Rossum Corry Banks Meng Qi and Dani Dobkin among others Modular Synthesis is recommended reading for advanced undergraduates researchers and practitioners of electronic music and music technology Chapter 3 of

Between Air and Electricity Cathy van Eck, 2017-02-09 Composers and sound artists have explored for decades how to transform microphones and loudspeakers from inaudible technology into genuinely new musical instruments While the sound reproduction industry had claimed perfect high fidelity already at the beginning of the twentieth century these artists found surprising ways of use for instance tweaking microphones swinging loudspeakers furiously around ditching microphones in all kinds of vessels or strapping loudspeakers to body parts of the audience Between air and electricity traces their quest and sets forward a new theoretical framework providing historic background on technological and artistic development and diagrams of concert and performance set ups From popular noise musician Merzbow to minimalist classic Alvin Lucier cult instrument inventor Hugh Davies or contemporary visual artist Lynn Pook they all aimed to make audible what was supposed to remain silent

The Music of Sounds and the Music of Things Leigh Landy, John Richards, 2024-09-30 This book investigates two areas in which the appreciation of sonic creativity can be easily acquired across diverse cultures, ages and interests: the music of sounds (making music with any sounds part of today's sampling culture) and the music of things (the creation of instruments using existent materials, another type of sampling involving the notion of instrument as composition as part of today's DIY or DIT 'do it together' culture). The book offers broad discussions regarding the music of things (written by John Richards) followed by the music of sounds (written by Leigh Landy). These chapters are followed by a focus on the workshop demonstrating the collaborative and inclusive potential in both areas and a spotlight on eight artists with a broad diversity of backgrounds and approaches to sound and music who discuss their perceptions. The book's conclusion focuses on similarities and differences between the music of sounds and the music of things, suggesting finally that both might form part of the 21st century's folk music landscape. The book is primarily aimed towards students interested in current forms of sonic creativity but will be of interest to those interested in broader issues of sampling culture, hacking and sound studies.
