

Fig. 6.6. Transients evoked by interrupting the starting current of a 13.8 kV, 3,000 HP motor. t_1 contacts of circuit breaker separate; t_2 current interrupted in phase *A*; t_3 current interrupted in phases *B* and *C*. (Courtesy American Electric Power Company).

A situation very close to that which has just been described occurs when the starting of a motor is aborted and the circuit breaker or contactor interrupts the starting current. The motor, at rest, behaves like a three-phase reactor with its neutral isolated. An oscillogram for such a switching operation is presented in Fig. 6.6. Phase *A* is seen to interrupt first, creating clearly discernable discontinuities in the currents of the other two phases, which now become equal and opposite. Simultaneous interruption of the currents in phases *B* and *C* occurs 90° later; note the lower recovery voltages experienced by poles *B* and *C* of the breaker compared with that of phase *A*. Note, also, that these are equal and opposite.

Gupta,2012-12-06 In any rotating machinery system the bearing has traditionally been a crit ical member of the entire system since it is the component that permits the relative motion between the stationary and moving parts Depending on the application a number of different bearing types have been used such as oil lubricated hydrodynamic bearings gas bearings magnetic suspensions rolling element bearings etc Hydrodynamic bearings can provide any desired load support but they are limited in stiffness and the associated power loss may be quite large Gas bearings are used for high precision applications where the supported loads are relatively light bearing power losses are very low and the rotating speeds generally high For super precision components where no frictional dissipation or bearing power loss can be tolerated magnetic suspensions are employed again the load support requirements are very low Rolling element bearings have been widely used for those applications that require greater bearing versatility due to the requirements for high load and high stiffness characteristics while allowing moderate power loss and permitting variable speeds A study of the dynamic interaction of rolling elements is therefore the subject of this text Texts covering the analysis and design methodology of rolling elements are very limited Notable works include Analysis of Stresses and Deflections Jones 1946 Vols I and II Ball and Roller Bearings Their Theory Design and Application Eschmann Hasbargen and Weigand 1958 Ball and Roller Bearing Engineering Palmgren 1959 3rd ed Advanced Bearing Technology Bisson and Anderson 1965 and Rolling Bearing Analysis Harris 1966 *Text of "A" Papers from the Summer Meeting, Los Angeles, California, July 16-21, 1978* IEEE Power Engineering Society,1978 *Text of "A" Papers from the Summer Meeting* IEEE Power Engineering Society.
