designed for architecture students and professionals this book provides an interactive approach to teaching the basics of parametric thinking in relation to architecture and design *Handbook of Nature-study for Teachers and Parents Based on the Cornell Nature-study Leaflets, with Much Additional Material and Many New Illustrations* Anna Botsford Comstock, 1911

Urban Galapagos Thomas Kvan, Justyna Karakiewicz, 2018-11-09 This book addresses the future of urbanisation on the Galapagos Islands from a systems governance and design perspective with the competing parameters of liveability economic and ecological using the Galapagos as a laboratory for the theoretical and postulative understanding of evolving settlement and habitation The Galapagos islands are one of the world's most examined and reported examples of a series of naturally evolving ecosystems The biodiversity of these island ecosystems are the focus of tourism and the image across the world yet human settlement are part of the local ecology While human intervention is limited the islands are a distinctive context in which to consider the impact of human habitation as a part of our ecosystems In this book authors take the framework of complex adaptive systems CAS in which to model systems that grow and evolve the relations between these various sectors change systems that get more complex as they evolve Tested and applied discretely in the two realms of natural and urban for the first time this text will bring the two together in understanding options for the future of urban settlements on the Galapagos Islands and by extension consider how the approach can be used globally in other contexts
