Is Science Multicultural? Sandra Harding, 1998-02-22 Explores what the last few decades of European American feminist and postcolonial science and technology studies can learn from each other This book proposes new directions for thinking about objectivity method and reflexivity in light of the new understandings developed in the post World War II world

*Is Science Multicultural?* Sandra G. Harding, 1998 Sandra Harding explores what practitioners of Euro American feminist and postcolonial science and technology studies can learn from each other She discusses the array of postcolonial science studies that have flourished over the last three decades and probes their implications for northern science All three science studies strains have developed in the context of post World War II science and technology projects They illustrate how technoscientific projects mean different things to different groups The meaning attached by the culture of the West may not be shared or may be diametrically opposite in other world cultures All however would agree that scientific projects modern science included are local knowledge systems Harding argues that the interests and discursive resources that the various science studies groups bring to their projects and the ways that they organize the production of their kind of science studies are also culturally local How is this cultural situatedness of knowledge both an invaluable resource as well as a limitation on the advance of knowledge What are the distinctive resources that the feminist and postcolonial science theorists offer in thinking about the history of modern science Carefully balancing poststructuralist and conventional epistemological resources this study proposes new directions for thinking about objectivity method and reflexivity in the new and future world of science and technology

**Meta-Philosophical Reflection on Feminist Philosophies of Science** Maria Cristina Amoretti, Nicola Vassallo, 2015-12-21 This volume offers a meta philosophical reflection on feminist philosophies of science It emphasizes and discusses both the connections and differences between traditional philosophies of science and feminist philosophies of science The collection systematically analyses feminist contributions to the various philosophies of specific sciences Each chapter is devoted to a specific area of philosophy of science general philosophy of science philosophy of biology philosophy of climate sciences philosophy of cognitive sciences and neurosciences philosophy of economics philosophy of history and archaeology philosophy of logic and mathematics philosophy of medicine philosophy of psychology philosophy of physics and philosophy of social sciences Since some of these areas have so far rarely been addressed by feminist philosophers this new collection provides new angles and stimulates the debate on pivotal issues that are part and parcel of both traditional philosophies of science and feminist philosophies of science Using a range of different methodologies and styles the essays all show great clarity in both arguments and contents

**Feminist Science Fiction and Feminist Epistemology** Ritchie Calvin, 2016-09-11 This book argues that feminist science fiction shares the same concerns as feminist epistemology challenges to the sex of the knower the valuation of the abstract over the concrete the dismissal of the physical the focus on rationality and reason the devaluation of embodied knowledge and the containment of

some bodies Ritch Calvin argues that feminist science fiction asks questions of epistemology because those questions are central to making claims of subjectivity and identity Calvin reveals how women who have historically been marginal to the deliberations of philosophy and science have made significant contributions to the reconsideration and reformulation of the epistemological models of the world and the individuals in it

**Toward a Global Science** Susantha Goonatilake, 1998

Asian science such as mathematics Chinese printing gunpowder and the compass all contributed to the development of European science During the last few centuries however scientific contributions with Asian roots have diminished and been marginalized and deligitimised Yet the center of the world economy today is shifting to Asia with shifts in science and technology bound to follow Toward a Global Science is driven by the proposition that pre Renaissance acquisition of Asian knowledge did not exhaust Asian civilization s potential contribution There are many useful elements to modern science still lying hidden in Asian civilizational stores waiting to be mined The author gives details of recent contributions from South Asian medicine mathematics and psychology and explores how South Asian inputs can be useful in navigating the philosophical and ethical problems raised by two dominant technologies of the future namely biotechnology and information technology As an illustrative example it describes how a fruitful marriage of one technology virtual reality with South Asian philosophy can enliven both the technology as well as philosophy It also examines how Asian positions could be used to feed some key contemporary philosophical discussions on science Using a model of the civilizational construction of science the book views science without Eurocentric blinders It documents how science was built initially by transfers from non European civilizations and why the given historiography of science has to be rethought Throughout the book the author gives examples of parallels and antecedents between East and West in science and estimates the potential reservoir of Asian knowledge in each field The book also deals with the many knotty problems in recovering science from past traditions The author distinguishes between his secular efforts from religious and other attempts that claim the equivalence of all knowledge systems

**The Epistemology of Experts** Peter Brössel, Anna-Maria Asunta Eder, Thomas Grundmann, 2025-08-28

This volume presents new research on the epistemology of experts It features original essays from leading epistemologists on this timely topic Modern societies benefit significantly from a certain kind of epistemic division of labor they outsource much of their epistemic work to well trained cognitive experts However due to their degree of specialization cognitive sophistication and highly privileged status cognitive experts tend to become alienated from laypeople This leads to what one may call the paradox of experts as experts become more competent specialized and sophisticated the harder it will be for laypeople to identify and trust experts The chapters in this volume explore the epistemology of expert judgment across several core themes and crucial questions Analysis of Experts What does it take to be a cognitive expert Epistemic Authority How much should we concede experts over laypeople The Social Roles of Experts What role do experts play in society and what role should they play Challenges What problems arise from experts epistemic authority and societal role The Epistemology of

Experts is an essential resource for scholars and advanced students working in epistemology philosophy of science political philosophy and the sociology of knowledge      EPSA11 Perspectives and Foundational Problems in Philosophy of Science Vassilios Karakostas,Dennis Dieks,2013-12-16 This book contains a selection of original conference papers covering all major fields in the philosophy of science that have been organized into themes The first section of this volume begins with the formal philosophy of science moves on to idealization representation and explanation and then finishes with realism anti realism and special science laws The second section covers the philosophy of the physical sciences looking at quantum mechanics spontaneous symmetry breaking the philosophy of space and time linking physics and metaphysics and the philosophy of chemistry Further themed sections cover the philosophies of the life sciences the cognitive sciences and the social sciences Readers will find that this volume provides an excellent overview of the state of the art in the philosophy of science as practiced in different European countries      *A Companion to the Anthropology of Europe* Ullrich Kockel,Máiréad Nic Craith,Jonas Frykman,2015-12-14 A Companion to theAnthropologyof Europe BLACKWELL COMPANIONS TO ANTHROPOLOGY A Companion to the Anthropology of Europe The volume also deserves a place on the shelves of academic libraries as well as the larger public library Reference Reviews Summing Up Highly recommended All academic levels libraries Choice This important collection challenges all anthropologists to re examine the importance of European perspectives on the most provocative debates of our time It transcends regional interests to highlight the complex intellectual landscape of our field Tracey Heatherington University of Wisconsin Milwaukee This significant volume critically interrogates assumptions about Europe as an idea and a place for research It provides fresh perspectives on the past and future of anthropological studies of Europe Deborah Reed Danahay SUNY at Buffalo President of the Society for the Anthropology of Europe A Companion to the Anthropology of Europe offers a survey of contemporary Europeanist anthropology and European ethnology and a guide to emerging trends in this geographical field of research Utilizing diverse approaches to the anthropological study of Europe Kockel Nic Craith and Frykman provide a synthesis of the different traditions and contemporary practices Investigating the subject both geographically and thematically the companion covers key topics such as location heritage experience and cultural practices Written by leading international scholars in the field the volume constitutes the first authoritative guide for researchers instructors and students of anthropology and European studies      Science and Social Inequality Sandra Harding,2023-12-11 In Science and Social Inequality Sandra Harding makes the provocative argument that the philosophy and practices of today s Western science contrary to its Enlightenment mission work to insure that more science will only worsen existing gaps between the best and worst off around the world She defends this claim by exposing the ways that hierarchical social formations in modern Western sciences encode antidemocratic principles and practices particularly in terms of their services to militarism the impoverishment and alienation of labor Western expansion and environmental destruction The essays in this collection drawing on feminist

multicultural and postcolonial studies propose ways to reconceptualize the sciences in the global social order At issue here are not only social justice and environmental issues but also the accuracy and comprehensiveness of our understandings of natural and social worlds The inadvertent complicity of the sciences with antidemocratic projects obscures natural and social realities and thus blocks the growth of scientific knowledge Scientists policy makers social justice movements and the consumers of scientific products that is the rest of us can work together and separately to improve this situation

Gender and Boyle's Law of Gases Elizabeth Potter, 2001-04-22 Gender and Boyle's Law of Gases Elizabeth Potter Re-examines the assumptions and experimental evidence behind Boyle's Law Boyle's Law which describes the relation between the pressure and volume of a gas was worked out by Robert Boyle in the mid 1600s His experiments are still considered examples of good scientific work and continue to be studied along with their historical and intellectual contexts by philosophers historians and sociologists Now there is controversy over whether Boyle's work was based only on experimental evidence or whether it was influenced by the politics and religious controversies of the time including especially class and gender politics Elizabeth Potter argues that even good science is sometimes influenced by such issues and she shows that the work leading to the Gas Law while certainly based on physical evidence was also shaped by class and gendered considerations At issue were two descriptions of nature each supporting radically different visions of class and gender arrangements Boyle's Law rested on mechanistic principles but Potter shows us an alternative law based on hylozoic principles the belief that all matter is animated whose adherents challenged social stability and the status quo in 17th century England Elizabeth Potter Alice Andrews Quigley Professor of Women's Studies at Mills College is co-editor of *Feminist Epistemologies* and author of numerous articles on feminist epistemology and feminist philosophy of science *Race Gender and Science* Anne Fausto Sterling general editor June 2001 232 pages 5 figs 6 x 9 index cloth 0 253 33916 2 34 95 L 26 50 paper 0 253 21455 6 17 95 s 13 95
