

MLC VS ISM

MLC 2006	ISM Code version 2013
Established in 2006 Entry in force 2013/14	Established in 92 but final implementation in 2002
Policy and health/safety at work programme including risk assessment and the corresponding training of the seafarers: Reg 4.3	The safety and environmental protection policy is the base of the code. The evaluation of the risks assessment and "safe working environment" are objectives only. As the ISM code remains vague on the corresponding training required, it was necessary to issue IMO circulars CMI to specify the necessary training of CPA and crews.
"Reasonable" precautions to prevent industrial accidents, wounds and occupational diseases on board and in a non mandatory part B 4.3: Taking into account of ILO guidelines (16) on the prevention of the accidents on board ships at sea or in port.	The ISM code is very general on this and requires only the insurance of application of mandatory rules and regulations (international or national) and taking into account the other existing recommendations concerning, inter alia, the prevention of the accidents and the possible diseases due to the carriage and handling of dangerous goods for example.
Onboard program for prevention with the participation of the crew These crewmembers can be elected or named at the ship's health and safety committee of the ship. Other interested people of the crew can apply to be part of it	The code being voluntarily general, it can be so precise that a circular or resolution is not necessary. The entry in force of MLC 2006 prevented that this aspect of the seafarers participation entered in ISM code amendments 2014

Waldemar Karwowski, Tareq Ahram, 2024-11-08 Proceedings of the AHFE International Conference on Human Factors in Design Engineering and Computing AHFE 2024 Hawaii Edition Honolulu Hawaii USA 8 10 December 2024 **LNG**

Offshore Production and Regasification Stuart Beadnall, John Simpson, Max Lemanski, 2025-04-23 This is the first book to focus on the law and practice relating to the production and delivery of liquified natural gas LNG using offshore floating facilities This segment of the offshore oil and gas industry has been growing over recent years and has now assumed special importance in the wake of interruption to international gas supplies with a number of countries turning to importing LNG through floating offshore regasification units in order to protect their energy security The reader will gain a thorough

understanding of the operational risks as far as these are relevant to contractual obligations and potential liabilities The book draws on the relevant maritime and commercial law applying this with specific focus on the requirements of offshore facilities liquefying carrying and storing a cargo at 162 C then regasifying and transferring the same onshore The contracts relating to the operation of these facilities mirror some aspects of conventional LNG vessel charters but include important additional features specific to offshore LNG operations The discharge of LNG from a sea going vessel into a receiving floating storage and regasification unit FSRU and the storage and regasification of LNG into the receiving pipeline may be problematic and lead to significant commercial consequences if there is underperformance The allocation of related risks as between the LNG owner and the FSRU operator and other interested parties is analysed in this book The authors also consider the specific legal issues pertaining to production of LNG offshore in a floating facility FLNG and the role of LNG as a transition fuel used to meet current low carbon targets This book will be invaluable to legal practitioners advising clients engaged in developing and operating offshore LNG projects project managers and related insurers financiers and commercial parties It will also be of direct relevance to gas production distribution and utility companies and to maritime commercial centres
