The Publishers Weekly ,1924 **Laboratory Experiments in Chemistry** Newton Henry Black,2017-10-15 Excerpt from **Laboratory Experiments in Chemistry To Accompany Black and Conant s Practical Chemistry** This book has been arranged to accompany black and conant s New Practical Chemistry The directions are framed primarily to meet the needs of students who are studying the subject for the first time These experiments are the result of the author s long experience as a teacher of beginners in chemistry Laboratory work in any science is fundamental and the study of a textbook merely extends and organizes the information that the student gets in the laboratory The experiments which the student does with his own hands Should make the fundamental principles of the science real and concrete to him It is also essential for him to perform certain experiments which will indicate how these facts and principles are utilized at home and in the commercial and industrial life

of the community The directions are at first very full and detailed but they are gradually abbreviated in order to leave more and more to the student's own initiative and imagination It is hoped that they are so clearly stated and illustrated that the teacher will be largely freed from the necessity of repeating the details of manipulation Frequent questions in italics have been inserted in the directions to focus the attention of the student on the important facts to be observed One of the aims of all laboratory work is to arouse the student's enthusiasm for finding things out by experiment To encourage this spirit additional experiments which are marked Optional have been included These may well be used to give elasticity and variety to the laboratory work as well as to emphasize the close connection between chemistry in the school laboratory and chemistry in the household in the factory or on the farm The introductory paragraphs are intended to give the setting of the experiment and to indicate its significance These may well be amplified by the teacher in the oral discussion preceding each experiment It is expected that the instructor will select those experiments which meet the needs of his class Probably an average class of beginners in chemistry can in one school year perform successfully not more than forty of these experiments It is far better to have a small number carefully done well written up and thoroughly understood than to rush through many carelessly About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
