Recording for the Blind & Dyslexic, ... Catalog of Books, 1996 *Photoelectrochemical Hydrogen Generation* Praveen Kumar, Pooja Devi, 2022-01-19 This book describes the hydrogen fuel generation from water via photoelectrochemical process. It elaborates the theory and fundamental concepts of photoelectrochemistry to understand the photoelectrochemical process for water splitting to generate hydrogen fuel. The book further deliberates about the hydrogen as a futuristic chemical fuel to store solar energy in the form of chemical bonds and also as a renewable alternative to fossil fuels. The book establishes the need for hydrogen fuel and discusses the standards and practices used for solar driven photoelectrochemical water splitting. It also discusses the current and future status of the nanomaterials as efficient photoelectrodes for solar photoelectrochemical water splitting. The book will be of interest to the researchers, students, faculty, scientists, engineers, and technologists working in the domain of material science, energy harvesting, energy conversion, photoelectrochemistry, nanomaterials for photoelectrochemical PEC cell, etc.

Inorganic Synthesis Nikolay Gerasimchuk, Sergiy Tyukhtenko, 2019-10-24 This book is designed to develop important practical skills for chemistry majors interested in synthetic chemistry. It will serve to teach students proper techniques for the preparation and handling of a variety of inorganic and coordination compounds. It shows them how to conduct thermal decomposition reactions, prepare moderately air sensitive and moisture sensitive compounds, and characterise obtained metal complexes using a variety of physical methods. This volume is well illustrated with colour photos, schemes, and figures that allow safe step by step work on assigned laboratory experiments. There are extensive pre lab instructions for techniques, concepts, and topics of experiments, and complete initial introductions to the methods used. During the lab, are also provided. Because of its clearly presented content with numerous practical examples, this book will be of great interest to chemistry professionals working in industry.

Integrated Approach to Coordination Chemistry Rosemary A. Marusak, Kate Doan, Scott D. Cummings, 2007-03-07 Coordination chemistry is the study of compounds formed between metal ions and other neutral or negatively charged molecules. This book offers a series of investigative inorganic laboratories approached through systematic coordination chemistry. It not only highlights the key fundamental components of the coordination chemistry field, it also exemplifies the historical development of concepts in the field. In order to graduate as a chemistry major that fills the requirements of the American Chemical Society, a student needs to take a laboratory course in inorganic chemistry. Most professors who teach and inorganic chemistry laboratory prefer to emphasize coordination chemistry rather than attempting to cover all aspects of inorganic chemistry because it keeps the students focused on a cohesive part of inorganic chemistry which has applications in medicine, the environment, molecular biology, organic synthesis, and inorganic materials.
