

LAB _____, NATURAL CONTROLS OF POPULATIONS

The size of populations in a community are regulated in many ways. Some of the controls acting on populations are:

- the amount of food and water available to feed the population
- the amount of nesting sites available to support raising young
- the size of the predator population
- the amount of disease and parasites infecting the population

Because of these limitations a certain area can only support a certain size population of each type of organism. The population size of each creature that the environment can support is called the **carrying capacity** of that community. This limit represents how many of a certain species that can survive in that area.

In this lab we will study two real life examples of populations, their natural controls, and the carrying capacity of their community.

The Kaibab Deer

In the early 1900s, the Kaibab plateau, north of the Grand Canyon in Arizona, supported a population of about 4000 deer on over 700,000 acres. Predators, such as coyotes, wolves, and pumas, helped to keep the deer population in check. It was estimated at the time that the plateau had a carrying capacity of about 30,000 deer, so that there seemed to be plenty of food for the population that existed.

Ranchers who moved into the area lost many sheep and cattle to the predators. Then on November 28th, 1906, President Theodore Roosevelt created the Grand Canyon National Game Preserve to protect the "finest deer herd in America." In an effort to save livestock and increase the deer population for tourists, the Forest Service tried to exterminate the predators of the deer. Between 1907 and 1923, 816 mountain lions, 30 wolves, 7388 coyotes and more than 500 bobcats were killed.

With the successful removal of many of the predators, the deer herd increased dramatically. But signs that the deer population was out of control began to appear as early as 1920 and the range (the deer habitat) was beginning to deteriorate rapidly. The food supply was being overgrazed by the high population of deer. Trees and grass were being damaged to the point they couldn't recover for next year's growing season. Soon there wasn't enough food to feed the growing population. By 1923, the deer were reported to be on the verge of starvation and the range conditions were described as "deplorable."

The Kaibab Deer Investigating Committee recommended that the number of deer be cut in half as quickly as possible. Hunting was allowed, and during the fall of 1924, 675 deer were killed by hunters. However, these deer represented only one-tenth the number of deer that had been born that spring. Over the next two winters, it is estimated that 60,000 deer starved to death.

Today, the Arizona Game Commission carefully manages the Kaibab area. Hunting permits are issued to keep the deer in balance with their range. Predators were re-introduced and are now protected to help keep herds in balance with food supplies. Tragic winter losses are now reduced by keeping the number of deer near the carrying capacity of the range.

Wild Immunology—The Answers Are Out There Gregory M. Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e.g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species Controlling Pests Dennis R. Austad, 2011-04-28 The Handbook of the Biology of Aging Sixth Edition provides a comprehensive overview of the latest research findings in the biology of aging Intended as a summary for researchers it is also adopted as a high level textbook for graduate and upper level undergraduate courses The Sixth Edition is 20% larger than the Fifth Edition with 21 chapters summarizing the latest findings in research on the biology of aging The content of the work is virtually 100% new Though a selected few topics are similar to the Fifth Edition these chapters are authored by new contributors with new information The majority of the chapters are completely new in both content and authorship The Sixth Edition places greater emphasis and coverage on competing and complementary theories of aging broadening the discussion of conceptual issues Greater coverage of techniques used to study biological issues of aging include computer modeling gene profiling and demographic analyses Coverage of research on

Drosophila is expanded from one chapter to four New chapters on mammalian models discuss aging in relation to skeletal muscles body fat and carbohydrate metabolism growth hormone and the human female reproductive system Additional new chapters summarize exciting research on stem cells and cancer dietary restriction and whether age related diseases are an integral part of aging The Handbook of the Biology of Aging Sixth Edition is part of the Handbooks on Aging series including Handbook of the Psychology of Aging and Handbook of Aging and the Social Sciences also in their 6th editions

Targeting Top Terrorists Bryan C. Price, 2019-01-15 When President Barack Obama announced the assassination of Osama bin Laden many Americans hoped the killing of al Qaida s leader would sound the death knell for the organization Since 9 11 killing and capturing terrorist leaders has been a central element in U S counterterrorism strategy This practice known as leadership decapitation is based on the logic that removing key figures will disrupt the organization and contribute to its ultimate failure Yet many scholars have argued that targeted killings are ineffective or counterproductive questioning whether taking out a terror network s leaders causes more problems than it solves In Targeting Top Terrorists Bryan C Price offers a rich data driven examination of leadership decapitation tactics providing theoretical and empirical explanations of the conditions under which they can be successful Analyzing hundreds of

cases of leadership turnover from over two hundred terrorist groups Price demonstrates that although the tactic may result in short term negative side effects the loss of top leaders significantly reduces terror groups life spans He explains vital questions such as What factors make some terrorist groups more vulnerable than others Is it better to kill or capture terrorist leaders How does leadership decapitation compare to other counterterrorism options With compelling evidence based on an original dataset along with an in depth case study of Hamas Targeting Top Terrorists contributes to scholarship on terrorism and organizational theory and provides insights for policy makers and practitioners on some of the most pressing debates in the field

Cracking the Aging Code Josh Mitteldorf,Dorion Sagan,2016-06-14 Theoretical biologist Josh Mitteldorf and ecological philosopher Dorion Sagan posit that evolution and aging are even more complex and breathtaking than we originally thought Using multidisciplinary science as well as reviewing the history of our understanding about evolution this book makes the case that aging is not something that just happens nor is it the result of wear and tear or a genetic inevitability Rather aging has a fascinating evolutionary purpose to stabilize populations and ecosystems which are ever threatened by cyclic swings that can lead to extinction

Proceedings of the Predator Control Summit, January 15, 1980, Austin, Texas ,1980 **Congressional Record** United States. Congress,1976 **Extreme Environmental Change and Evolution** Ary A. Hoffmann,Peter A. Parsons,1997-07-10 Most natural populations intermittently experience extremely stressful conditions This book discusses how such conditions can cause periods of intense selection increasing both phenotypic and genetic variation and allowing organisms with novel characteristics to be first generated and then established in the population The authors argue that stressful conditions can have a major impact on the environment backing up their arguments with evidence from the fossil record They suggest further that as a consequence periods of stress must be taken into consideration when long term conservation strategies are planned particularly as stressful conditions are becoming increasingly prevalent as a result of human activities This broad overview will be of great interest to students and researchers in the field of evolutionary biology genetics ecology palaeontology and conservation biology
