**Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2010** Tianzi Jiang, Nassir Navab, Josien P.W. Pluim, Max A. Viergever, 2010-09-21 The 13th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2010 was held in Beijing China from 20-24 September 2010 The venue was the China National Convention Center CNCC China's largest and newest conference center with excellent facilities and a prime location in the heart of the Olympic Green adjacent to characteristic constructions like the Bird's Nest National Stadium and the Water Cube National Aquatics Center MICCAI is the foremost international scientific event in the field of

medical image computing and computer assisted interventions The annual conference has a high scientific standard by virtue of the threshold for acceptance and accordingly MICCAI has built up a track record of attracting leading scientists engineers and clinicians from a wide range of technical and biomedical disciplines This year we received 786 submissions well in line with the previous two conferences in New York and London Three program chairs and a program committee of 31 scientists all with a recognized standing in the field of the conference were responsible for the selection of the papers The review process was set up such that each paper was considered by the three program chairs two program committee members and a minimum of three external reviewers The review process was double blind so the reviewers did not know the identity of the authors of the submission After a careful evaluation procedure in which all controversial and gray area papers were discussed individually we arrived at a total of 251 accepted papers for MICCAI 2010 of which 45 were selected for podium presentation and 206 for poster presentation The acceptance percentage 32% was in keeping with that of previous MICCAI conferences All 251 papers are included in the three MICCAI 2010 LNCS volumes

Design for Sustainability  
Tracy Bhamra, Vicky Lofthouse, 2016-04-22 Design for Sustainability is a practical approach to design which focuses on the challenges and issues faced by those designing consumer products in the 21st Century It is written from a design perspective and aimed at both professional and student industrial and product designers and those involved in managing design The book begins by summarising the historical and current issues of the environmental debate in the context of sustainable product development highlighting the benefits gained from considering the impact on the environment and issues of sustainability when designing The authors answer the questions What is sustainable product development and why is it important What are the main drivers of sustainable product development They explain how design can help to control human impact on the environment by not only minimising pollution waste energy use and use of scarce resources but also by thinking outside the box to create systems and services that can reduce the number of products manufactured The aim is to put sustainable development within a commercial context and introduce a new focus for design Design for Sustainability outlines and assesses the methods tools and techniques available to designers both for design innovation and design improvement A wide range of case studies are presented across a number of product sectors including electrical goods IT and furniture Initially they demonstrate product improvement and redesign examples include those that reduce waste pollution and energy consumption designing for recycling and reuse of parts Further examples are then provided exemplifying the more radical approach of system and service design The final section takes the reader through a whole sustainable design project from start to finish from brief to manufacture References and sources of information are also included

**Arterial Aging and Age-Associated Arterial Diseases** Mingyi Wang,Jiguang Wang,Gianfranco Pintus,Cuntai Zhang,2019-01-24

The underlying mechanisms behind aging has long been a great scientific mystery that the biomedical research community has long studied In developed nations as the population grows older increases in life expectancy is increasingly limited by our relatively poor control of chronic aging associated diseases such as arterial aging Among age related conditions that negatively influence longevity Growing evidence demonstrates that arterial aging is fundamentally caused by a proinflammatory process that begins at birth and results in detrimental effects that affects every organ system Vascular aging is the leading risk factor for quintessential cardiovascular diseases such as hypertension and atherosclerosis With aging vascular walls develop a pro inflammatory and stressed microenvironment characterized by both an upregulation of pro inflammatory chemokines and cytokines as well as a down regulation anti inflammatory counterparts This chronic imbalance in inflammatory regulatory networks is the key driver of changes at the cellular and molecular level that result in hypertensive and atherosclerotic arterial Thus an intervention of proinflammation may be a viable therapeutic intervention to reduce morbidity and mortality from cardiovascular diseases In this eBook we aim to supply an updated overview of the physiological and biochemical mechanisms that affect inflammation and vascular aging We believe that this eBook will contribute to the understanding of the pathogenesis of many chronic or age related diseases as well as to their treatment with both current and new therapeutic approaches
