

## Mathews 101: About Your New Bow.

Mathews Recreational

## Setting Up Your New Mathews Bow.

### Draw Length

Most Mathews® bows are engineered to be draw length specific and offer no draw length adjustment on the cam. Your shooting style should be measured to ensure a proper fit. Draw length is measured from rest point to the rest hole plus 1 1/4". If you intend to shoot with a release, make sure you measure draw length with your release on. If your bow seems too long or too short, consult your Authorized Mathews® Retailer about changing the cam (or module) to reach the desired draw length.

### Draw Weight

Mathews® bows have approximately a ten pound weight reduction range from the bow's peak weight (example: if the bow has a peak weight of 70 pounds, it can adjusted as low as 60 pounds). Draw weight adjustments are made using either a 1/16" or 1/32" Allen wrench. Turn the limb bolt clockwise to increase the draw weight and counter-clockwise to decrease the weight. Each rotation equals approximately 2 to 4 pounds of draw weight.

**IMPORTANT:** Both limb-bolts must be adjusted equally or the bow may become out of tune.
