Mathematics In Civilization:

Mathematics in Civilization H. L. Resnikoff, Raymond O'Neil Wells (Jr.), 1973 How mathematics shaped and was shaped by human events Trigonometry navigation cartography algebra calculus and related disciplines from ancient Greece through the twentieth century Bibliography 203 figures 7 tables 14 photos **The Art of More** Michael Brooks, 2022-01-18 An illuminating millennia spanning history of the impact mathematics has had on the world and the fascinating people who have mastered its inherent power Counting is not innate to our nature and without education humans can rarely count past three beyond that it's just more But once harnessed by our ancestors the power of numbers allowed humanity to flourish in ways that continue to lead to discoveries and enrich our lives today Ancient tax collectors used basic numeracy to fuel the growth of early civilization navigators used clever geometrical tricks to engage in trade and connect people across vast distances astronomers used logarithms to unlock the secrets of the heavens and their descendants put them to use to land us on the moon In every case mathematics has proved to be a greatly underappreciated engine of human progress In this captivating sweeping history Michael Brooks acts as our guide through the ages He makes the case that mathematics was one of the foundational innovations that catapulted humanity from a nomadic existence to civilization and that it has since then been instrumental in every great leap of humankind Here are ancient Egyptian priests Babylonian bureaucrats medieval architects dueling Swiss brothers renaissance painters and an eccentric professor who invented the infrastructure of the online world Their stories clearly demonstrate that the invention of mathematics was every bit as important to the human species as was the discovery of fire From first page to last *The Art of More* brings mathematics back into the heart of what it means to be human *Mathematics in Civilization, Third Edition* Howard L. Resnikoff, Raymond O. Wells, Jr., 2015-03-18 Originally published New York Holt Rinehart and Winston 1973 Enlarged and corrected edition published New York Dover Publications 1984 *Worlds of ScienceCraft* Sal Restivo, Sabrina M. Weiss, Alexander Stingl, 2016-02-11 A response to complex problems spanning disciplinary boundaries *Worlds of ScienceCraft* offers bold new ways of conceptualizing ideas of science sociology and philosophy Beginning with the historical foundations of civilization and progress assumptions about the categories we use to talk about minds identities and bodies are challenged through case studies from mathematics social cognition and medical ethics Offering innovative approaches to these issues such as an integrated social brain mind body model and a critique of divisions between the natural and technological this book provides novel conceptions of self society and an emerging cyborg generation From the micro level of brains and expanding all the way out to biopolitical civics disciplinary boundaries are made permeable emphasizing the increased need for interdisciplinary scholarship By rejecting outdated and restrictive categories and classifications new horizons in studies of science technology and medicine can be explored through the incorporation of feminist international and postmodern perspectives A truly interdisciplinary examination of science and technology as cultural phenomena *Worlds of ScienceCraft* will appeal to scholars and students of science and technology

accessible to someone without a mathematical background **Early Chinese Work in Natural Science** Joseph C.Y. Chen,1996-03-01 This book re examines the nature of early Chinese work in natural science on the basis of original records analysis and artifacts discovered in recent decades by archaeological explorations of China s past It presents a concise account of early scientific ideas and thoughts of nature and their effect on the development of natural science It is suggested that the traditional characterization of early Chinese work in natural science requires substantial modification The absence of early Chinese participation in the development of modern science is not as commonly assumed a consequence of lacking early scientific tradition in ancient China It is argued that the concept of inhibitive factors is dubious without taking their dynamical relationships into account and that socio economical and political influence has to be considered when seeking answers to the major setbacks in science and technology in China The book also shows that there is no basis for the claims saying that acoustics and astronomy in China have their roots in Babylon **Technology Architectural Record** ,1915
