Zero Syamal K. Sen, Ravi P. Agarwal, 2015-11-06 Zero indicates the absence of a quantity or a magnitude It is so deeply rooted in our psyche today that nobody will possibly ask What is zero From the beginning of the very creation of life the feeling of lack of something or the vision of emptiness void has been embedded by the creator in all living beings While recognizing different things as well as the absence of one of these things are easy it is not so easy to fathom the complete nothingness viz the universal void Although we have a very good understanding of nothingness or equivalently a zero today our forefathers had devoted countless hours and arrived at the representation and integration of zero and its compatibility not only with all non zero numbers but also with all conceivable environments only after many painstaking centuries Zero can be viewed perceived in two distinct forms i as a number in our mundane affairs and ii as the horrific void or Absolute Reality in the spiritual plane the ultimate state of mind Presented are the reasons why zero is a landmark discovery and why it has the potential to conjure up in an intense thinker the dreadful nothingness unlike those of other numbers such as 1 2 and 3 Described are the

representation of zero and its history including its deeper understanding via calculus its occurrences and various roles in different countries as well as in sciences engineering along with a stress on the Indian zero that is accepted as the time invariant unique absolute zero This is followed by the significant distinction between mathematics and computational mathematics and the concerned differences between the unique absolute zero and non unique relative numerical zeros and their impact and importance in computations on a digital computer Introduces the history of the value of zero and why it was a landmark discovery Discusses how zero is used in science and engineering and its use in different countries Explains how zero affects different mathematics and calculus

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee s report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14 19 year old students based on the International Baccalaureate This would ensure that

students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools
