Mathematics For Economics Hoy 3rd Edition:

Mathematics for Economics, third edition Michael Hoy, John Livernois, Chris McKenna, Ray Rees, Thanasis Stengos, 2011-03-11 A new edition of a comprehensive undergraduate mathematics text for economics students. This text offers a comprehensive presentation of the mathematics required to tackle problems in economic analyses. To give a better understanding of the mathematical concepts, the text follows the logic of the development of mathematics rather than that of an economics course. The only prerequisite is high school algebra, but the book goes on to cover all the mathematics needed for undergraduate economics. It is also a useful reference for graduate students. After a review of the fundamentals of sets, numbers, and functions, the book covers limits and continuity, the calculus of functions of one variable, linear algebra, multivariate calculus, and dynamics. To develop the student's problem-solving skills, the book works through a large number of examples and economic applications. This streamlined third edition offers an array of new and updated examples. Additionally, lengthier proofs and examples are provided on the book's website. The book and the web material are cross-referenced in the text. A student solutions manual is available, and instructors can access online instructor's material that includes solutions and PowerPoint slides. Visit http://mitpress.mit.edu/math_econ3 for complete details.

Prostitution Eva-Maria Heberer, 2013-12-06 Eva Maria Heberer provides an overview over the history of prostitution in Germany in which she discusses changes in legislation in society and its view on prostitution as well as in the market for commercial sex since 1846 Two different models describing a woman's decision to engage in sex work are suggested Both are kept as general as possible and based on universal microeconomic models The effect of a changing probability of getting caught selling commercial sex is analyzed using the Slutsky decomposition Relevant variables influencing the supply of sex work are identified and measured using historical and up to date data for the state of Hamburg and Germany Correlations between the variables are described and discussed allowing to conclude that a higher probability of getting caught led to a lower supply of commercial sex over the years
