New Polymers for Encapsulation of Nutraceutical Compounds Jorge Carlos Ruiz Ruiz,Maira Rubi Segura Campos,2017-01-24 The incorporation of functional ingredients in a given food system and the processing and handling of such foods are associated with nutritional challenges for their healthy delivery The extreme sensitivity of some components cause significant loss of product quality stability nutritional value and bioavailability and the overall acceptability of the food product Consequently encapsulation has been successfully used to improve stability and bioavailability of functional ingredients Encapsulation is one example of technology that has the potential to meet the challenge of successfully incorporating and delivering functional ingredients into a range of food types The book will cover topics about 1 Characterization of novel polymers and their use in encapsulation processes 2 Stability of nutraceutical compounds encapsulated with novel polymers 3 Application of encapsulated compounds with novel polymers in functional food systems This book provides a detailed overview of technologies for preparing and characterisation of encapsulates for food active ingredients using modified polymers The use of modified polymers as coating materials it is a field that still needs study The book is aimed to inform students and researchers in the areas of food science and food technology and professionals in the food industry

Sustainable Food Processing Brijesh K. Tiwari,Tomas Norton,Nicholas M. Holden,2013-12-31 Sustainable Food Processing Food processors face numerous challenges from ever changing economic social and environmental conditions With global inequalities increasing ingredient costs climbing and global climate change becoming a major political issue food producers must now address environmental concerns social responsibility and economic viability when shaping their food processing techniques for the future Food production preservation and distribution contribute to greenhouse gas emissions from the agri food sector therefore food producers require detailed industrially relevant information that addresses these challenges The food industry as one of the world s largest users of energy must embrace new ways of meeting the needs of the present without compromising future viability It is important that the industry does not merely focus on simple indicators of sustainability that are relatively easy to calculate and hold appeal for governments and the public but which do not properly address the many dimensions of sustainability This book provides a comprehensive overview of both economic sustainability and the environmental concerns that relate to food

processing It is divided into four sections Part one deals with principles and assessment of sustainability in the context of food processing Part two summarises sustainability in various food processing applications within the food industry Part three considers sustainability in food manufacturing operations that are vital in food production systems and Part four addresses sustainable food distribution and consumption As the most comprehensive reference book for industry to date this book will provide engineers educators researchers policy makers and scientists working in the food industry with a valuable resource for their work

Innovation in Healthy and Functional Foods Dilip Ghosh, Shantanu Das, Debasis Bagchi, R.B. Smarta, 2016-04-19 The focus of food science and technology has shifted from previous goals of improving food safety and enhancing food taste toward providing healthy and functional foods Today's consumers desire foods that go beyond basic nutrition foods capable of promoting better health or even playing a disease prevention role To meet this need for innovation

Microwave-assisted Extraction for Bioactive Compounds Farid Chemat, Giancarlo Cravotto, 2012-12-12 With increasing energy prices and the drive to reduce CO₂ emissions food industries are challenged to find new technologies in order to reduce energy consumption to meet legal

requirements on emissions product process safety and control and for cost reduction and increased quality as well as functionality Extraction is one of the promising innovation themes that could contribute to sustainable growth in the chemical and food industries For example existing extraction technologies have considerable technological and scientific bottlenecks to overcome such as often requiring up to 50% of investments in a new plant and more than 70% of total process energy used in food fine chemicals and pharmaceutical industries These shortcomings have led to the consideration of the use of new green techniques in extraction which typically use less solvent and energy such as microwave extraction Extraction under extreme or non classical conditions is currently a dynamically developing area in applied research and industry Using microwaves extraction and distillation can now be completed in minutes instead of hours with high reproducibility reducing the consumption of solvent simplifying manipulation and work up giving higher purity of the final product eliminating post treatment of waste water and consuming only a fraction of the energy normally needed for a conventional extraction method Several classes of compounds such as essential oils aromas anti oxidants pigments colours fats and oils carbohydrates and other bioactive compounds have been extracted efficiently from a variety of matrices mainly animal tissues food and plant materials The advantages of using microwave energy which is a non contact heat source includes more effective heating faster energy transfer reduced thermal gradients selective heating reduced equipment size faster response to process heating control faster start up increased production and elimination of process steps This book will present a complete picture of the current knowledge on microwave assisted extraction MAE of bioactive compounds from food and natural products It will provide the necessary theoretical background and details about extraction by microwaves including information on the technique the mechanism protocols industrial applications safety precautions and environmental impacts
