Handbook of Molecular Self-Assembly Klaus-Viktor Peinemann, 2015 **Handbook of Molecular Self-Assembly**

Klaus-Viktor Peinemann, Mihai Barboiu, 2015-12-15 Self assembly is a process by which a supramolecular species forms spontaneously from its components. It is one of the most important strategies used in biology for the development of complex functional structures. Since the groundbreaking work of Nobel laureate Jean Marie Lehn on supramolecular chemistry, the concept of self assembly has gained exploding interest for the development of man-made devices. **Handbook of Molecular Self Assembly Principles Fabrication and Devices** covers all aspects from basic principles of self-organization to applications in nanotechnology and medicine. Well-known experts in the field review topics like self-assembled monolayers (SAMs) and their applications, dynamic molecular and supramolecular polymers, dynamic nanostructure fabrication using block copolymers, polymer self-assembly for semiconductor development, molecular engineered stimuli-responsive polymer films, self-organized polymeric and inorganic membranes, and more.

Nanofabrication Handbook Stefano Cabrini, Satoshi Kawata, 2012-02-24 While many books are dedicated to individual aspects of nanofabrication, there is no single source that defines and explains the total vision of the field. Filling this gap, **Nanofabrication Handbook** presents a unique collection of new and the most important established approaches to nanofabrication. Contributors from leading research facilities and **Physics,**
