Biofilms in Human Diseases: Treatment and Control Sunil Kumar, Niharika Chandra, Leena Singh, Muhammad Zaffar Hashmi, Ajit Varma, 2019-11-19 This book highlights treatment strategies for bacterial biofilms in connection with a variety of human diseases In particular it reviews bacterial biofilm formation and its mechanism Topics covered include biofilms in human

health the role of biofilms in mediating human diseases and methods for testing bacterial biofilms Further sections concentrate on biofilm mediated diseases in different parts of the human gastrointestinal tract while therapeutic strategies for biofilm control and natural agents that disrupt bacterial biofilms are also covered Readers will also find the latest advances in probiotics and biofilms as well as the use of probiotics to counteract biofilm associated infections Biofilms and antimicrobial resistance are discussed Subsequent chapters address the management of inflammatory bowel disease via probiotics biofilms as well as the role of probiotics bacteria in the treatment of human diseases associated with bacterial biofilms The book is chiefly intended for clinicians scientists in the fields of medical microbiology applied microbiology biochemistry and biotechnology

Environmental Health Perspectives, 1993 **Microbial Growth in Biofilms** Ronald J. Doyle, 2001 This volume and its companion Volume 337 supplement Volume 310 These volumes provide a contemporary sourcebook for virtually any kind of experimental approach involving biofilms They cover bioengineering molecular genetic microscopic chemical and physical methods

In Vivo Glucose Sensing David D. Cunningham, Julie A. Stenzen, 2009-11-19 In Vivo Glucose Sensing is a key reference for scientists and engineers working on the development of glucose sensing technologies for the management of diabetes and other medical conditions It discusses the analytical chemistry behind the strategies currently used for measuring glucose in vivo It focuses on analyzing samples in the real world and discusses the biological complexities that make glucose sensing difficult Covering current implantable devices next generation implantable sensing methods and non invasive methods for measuring glucose this book concludes with an overview of possible applications other than diabetes

Glycoscience and Microbial Adhesion Thisbe K. Lindhorst, Stefan Oscarson, Julie Bouckaert, 2009-06-23 bacterial carbohydrate recognition are conveyed covering Gram positive as well as Gram negative bacteria in Chapter 4 Streptococci and Staphylococci and in Chapter 5 carbohydrate binding specificities of Helicobacter pylori In Chapter 6 Bitter sweetness of complexity the collected reflections on microbial adhesion are expanded by a perspective on a broader impact of glycosylation on cellular adhesion motility and regulatory processes paralleling the complexity of N glycan structures on cell surfaces It highlights particularly how structural details of N glycans have been causally related to pathological scenarios with a focus on 1 6 N acetylglucosaminyltransferase In the final chapter biofilm formation is reviewed covering knowledge about structure and biosynthesis of polysaccharide intercellular adhesins PIAs which are central to biofilm formation This comprehensive chapter explains all PIA related principles of medical device associated infections It is our hope that this collection of expert articles ranging from structural chemistry and structural biology to biochemistry and medicine will be a stimulation and motivation for our colleagues in the life sciences At the same time we hope that these reflections on microbial adhesion will awake interest in and promote understanding of the complex processes associated with the glycocalyx and the multifaceted interactions between the host cell and its guest as well as the biological consequences resulting from this mutual interplay

Biological Hazards in Food Maria Schirone, Pierina

Visciano, Rosanna Tofalo, Giovanna Suzzi, 2017-03-07 The ingestion of food containing pathogenic microorganisms i.e. bacteria and their toxins fungi viruses and parasites can cause food borne diseases in humans A growing number of emerging pathogens changes of virulence of known pathogens and appearance of antibiotic resistance has recently exposed consumers to a major risk of illness Also infected people and the environment can spread microorganisms on raw or processed food Outbreaks of food borne diseases are often unrecognized unreported or not investigated and particularly in developing countries their agents and sources are mostly unknown Surveillance and analytical methods aiming at their detection are to be hoped as well as good strategies to struggle against these threats This E book is subdivided in chapters regarding to pathogenic and spoiling microorganisms chemical hazards produced by biological agents and food safety management systems

Biofilms in Medicine, Industry and Environmental Biotechnology Piet Lens, V. O'Flaherty, A. P. Moran, P. Stoodley, T. Mahony, 2003-04-30 Biofilms are of great practical importance for beneficial technologies such as water and wastewater treatment and bioremediation of groundwater and soil In other settings biofilms cause severe problems for example in 65% of bacterial infections currently treated by clinicians particularly those associated with prosthetics and implants accelerated corrosion in industrial systems oil souring and biofouling Until recently the structure and function of biofilms could only be inferred from gross measures of biomass and metabolic activity This limitation meant that investigators involved in biofilm research and application had only a crude understanding of the microbial ecology physical structure and chemical characteristics of biofilms Consequently opportunities for the exploitation and control of biofilms were very limited The past decade has witnessed the development of several new techniques to elucidate the structure and function of biofilms Examples include the use of molecular probes that identify different microbes in complex communities as well as their metabolic functions the use of microsensors that show concentration gradients of key nutrients and chemicals the use of confocal laser scanning microscopy to describe the physical structure of biofilms and the development of a new generation of mathematical models that allow for the prediction of biofilm structure and function However much progress remains to be made in efforts to understand control and exploit biofilms This timely book will introduce its readers to the structure and function of biofilms at a fundamental level as determined during the past decade of research including Extracellular polymers as the biofilm matrix Biofilm phenotype differential gene expression interspecies signalling Biofilm ecology Biofilm monitoring Resistance of biofilms to antimicrobial agents and Biofilm abatement Biofilms in Medicine Industry and Environmental Technology offers a holistic and multi disciplinary description of the topic including biofilm formation and composition but also biofilm monitoring disinfection and control All these aspects are presented from three points of views medical industrial and environmental biotechnological in a compact easy to read format

Medical Biofilms Jana Jass, Susanne Surman, James Walker, 2003-04-02 Biofilms are formed by microorganisms growing on surfaces and comprise a series of microcolonies interspersed with spaces through which fluids and other microorganisms move In

medicine the primary problems are biofilms associated with implants infections are increasingly difficult to treat with traditional antibiotics and removal of the implant often becomes essential frequently leading to higher morbidity and mortality This will be the first book dedicated to medical biofilms It will cover much recent information on the problems of biofilms how to detect them and how to control their presence [Biointerfaces](#) Dietmar Hutmacher, Wojciech Chrzanowski, 2015 An up to date overview of the knowledge and methods used to control living organism responses to implantable devices *Advanced Materials Forum V* Luis Guerra Rosa, Fernanda Margarido, 2010-01-12 Selected peer reviewed papers from the V International Materials Symposium MATERIAiS 2009 14th meeting of SPM Sociedade Portuguesa de Materiais Instituto Superior Tecnico Technical University of Lisbon April 5-8 Lisbon Portugal 2009 [Medical Implications of Biofilms](#) Michael Wilson, Deirdre Devine, 2003-09-01 Human tissues often support large complex microbial communities growing as biofilms that can cause a variety of infections As a result of an increased use of implanted medical devices the incidence of these biofilm associated diseases is increasing the non shedding surfaces of these devices provide ideal substrata for colonisation by biofilm forming microbes The consequences of this mode of growth are far reaching As microbes in biofilms exhibit increased tolerance towards antimicrobial agents and decreased susceptibility to host defence systems biofilm associated diseases are becoming increasingly difficult to treat Not surprisingly therefore interest in biofilms has increased dramatically The application of microscopic and molecular techniques has revolutionised our understanding of biofilm structure composition organisation and activities resulting in important advances in the prevention and treatment of biofilm related diseases The purpose of this book which was first published in 2003 is to bring these advances to the attention of clinicians and medical researchers *Dormancy and Low Growth States in Microbial Disease* Anthony R. M. Coates, 2003-06-02 All cellular life forms can exist in replicating and non replicating states Organisms replicate only when the conditions are beneficial and when not replicating they concentrate on survival of these environmental stresses Many bacteria harmful to humans survive the period of infection in a low growth state This 2003 book addresses the basic science of microbial dormancy and low growth states putting this in the context of human medicine Such fundamental topics as bacterial growth and non growth culturability and viability are covered as well as survival of the host's immune response and inter bacterial signalling Following this introduction more medically focused topics are discussed namely antibiotic resistance arising during stationary phase biofilms the bacteria which cause gastric ulcers and tuberculosis as the classic persistent bacterial infection This book will interest graduate students and researchers in medical microbiology immunology and infectious disease medicine who are interested in bacterial dormancy in relation to disease **Handbook of Natural Fibres** Ryszard M. Kozlowski, 2012-09-21 Growing awareness of environmental issues has led to increasing demand for goods produced from natural products including natural fibres The two volume Handbook of natural fibres is an indispensable tool in understanding the diverse properties and applications of these important materials Volume 2 Processing and applications

focuses on key processing techniques for the improvement and broader application of natural fibres Part one reviews processing techniques for natural fibres Silk production and the future of natural silk manufacture are discussed as well as techniques to improve the flame retardancy of natural fibres and chemical treatments to improve natural fibre properties Ultraviolet blocking properties enzymatic treatment and electrokinetic properties are also discussed Part two goes on to investigate applications of natural fibres including automotive applications geotextiles paper and packaging and natural fibre composites NFCs for the construction and automotive industries The use of flax and hemp textiles made from jute and coir antimicrobial natural fibres and biomimetic textile materials are also considered before a final discussion of enhancing consumer demand for natural textile fibres With its distinguished editor and international team of expert contributors the two volumes of the Handbook of natural fibres are essential texts for professionals and academics in textile science and technology Focuses on key processing techniques for the improvement and broader application of natural fibres Reviews processing techniques for natural fibres including silk production and the future of natural silk manufacture Discusses ultraviolet blocking properties enzymatic treatment and electrokinetic properties among other topics *Perioperative Medical Management for Total Joint Arthroplasty* Andrea Baldini, Patrizio Caldora, 2014-11-01 This volume describes the most recent medical guidelines for perioperative management in arthroplasty with the aim of facilitating excellent control of bleeding thrombosis pain and infection For each area hemostasis control pain control and infection control hot topics of key practical importance are discussed and contrasting perspectives are presented on controversial issues covering the views of different practitioners and specialties Using the information contained in this book the practitioner will be in an excellent position to meet the principal goals of perioperative medical management The information provided will assist in the choice of a multimodal guideline that minimizes the complication rate regarding bleeding and thromboembolism while not interfering with the patient's recovery Similarly effective means of pain control and an optimized pain control protocol are discussed with a view to shortening hospital stay and achieving functional milestones that meet the patient's expectations Finally host wound and environmental factors relevant to infection and its prevention are explained with discussion of the best means of prophylaxis treatment and imaging Surgeons anesthesiologists and all medical practitioners and staff involved in the field of total hip and knee arthroplasty will find this book to be of value in their daily clinical practice It will assist in the provision of enhanced medical management that ensures quicker recovery of the patient with fewer complications

Antimicrobials, Antibiotic Resistance, Antibiofilm Strategies and Activity Methods Sahra

Kırmusaoğlu, 2019-04-03 To prevent bacterial adherence invasion and infection antimicrobials such as antibiotics are being used and vastly researched nowadays Several factors such as natural selection mutations in genes the presence of efflux pumps impermeability of the cell wall structural changes in enzymes and receptors biofilm formation and quorum sensing cause microorganisms to develop resistance against antimicrobials Isolates that synthesize extended spectrum lactamases

ESBL induced lactamases IBL carbapenamases metallo lactamases MBLs and New Delhi metallo lactamases NDM have emerged Determining virulence factors such as biofilms and the level of antimicrobial activities of antimicrobial agents alone and in combination with appropriate doses against microorganisms is very important for the diagnosis inhibition and prevention of microbial infection The goal of this book is to provide information on all these topics

Handbook of Biosensors and Biosensor Kinetics Ajit Sadana, Neeti Sadana, 2010-08-26 Biosensors are essential to an ever expanding range of applications including healthcare drug design detection of biological chemical and toxic agents environmental monitoring biotechnology aviation physics oceanography and the protection of civilian and engineering infrastructures This book like the previous five books on biosensors by this author and one by the co author addresses the neglected areas of analyte receptor binding and dissociation kinetics occurring on biosensor surfaces Topics are covered in a comprehensive fashion with homogeneous presentation for the benefit of the reader The contributors address the economic aspects of biosensors and incorporate coverage of biosensor fabrication and nanobiosensors among other topics The comments comparison and discussion presented provides a better perspective of where the field of biosensors is heading Serves as a comprehensive resource on biosensor analysis Examines timely topics such as biosensor fabrication and nanobiosensors Covers economic aspects and medical applications e.g the role of analytes in controlling diabetes
