## **Handbook Of Multibiometrics 6 International Series On Biometrics:**

**Multibiometrics for Human Identification** Bir Bhanu, Venu Govindaraju, 2011-04-29 In today's security conscious society real world applications for authentication or identification require a highly accurate system for recognizing individual humans. The required level of performance cannot be achieved through the use of a single biometric such as face, fingerprint, ear, iris, palm, gait, or speech. Fusing multiple biometrics enables the indexing of large databases, more robust performance, and enhanced coverage of populations. Multiple biometrics are also naturally more robust against attacks than single biometrics. This book addresses a broad spectrum of research issues on multibiometrics for human identification, ranging from sensing modes and modalities to fusion of biometric samples and combination of algorithms. It covers publicly available multibiometrics databases, theoretical and empirical studies on sensor fusion techniques in the context of biometrics authentication, identification, and performance evaluation, and prediction.

**International Conference on Advanced Computing, Networking and Informatics** Raj Kamal, Michael Henshaw, Pramod S. Nair, 2018-11-27 The book comprises selected papers presented at the International Conference on Advanced Computing, Networking and Informatics (ICANI 2018) organized by Medi Caps University, India. It includes novel and original research work on advanced computing, networking, and informatics and discusses a wide variety of industrial engineering and scientific applications of the emerging techniques in the field of computing and networking.

**Advanced Topics in Biometrics** Haizhou Li, Liyuan Li, Kar-Ann Toh, 2014-05-14 Biometrics is the study of methods for uniquely recognizing humans based on one or more intrinsic physical or behavioral traits. After decades of research activities, biometrics as a recognized scientific discipline has advanced considerably both in practical technology and theoretical discovery to meet the increasing need of biometric deployments. In this book, the editors provide both a concise and accessible introduction to the field as well as a detailed coverage on the unique research problems with their solutions in a wide spectrum of biometrics research, ranging from voice, face, fingerprint, iris, handwriting, human behavior to multimodal biometrics. The contributions also present the pioneering efforts and state-of-the-art results with special focus on practical issues concerning system development. This book is a valuable reference for established researchers and it also gives an excellent introduction for beginners to understand the challenges.
